

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

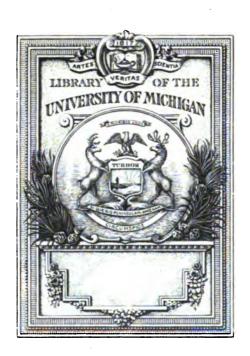

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

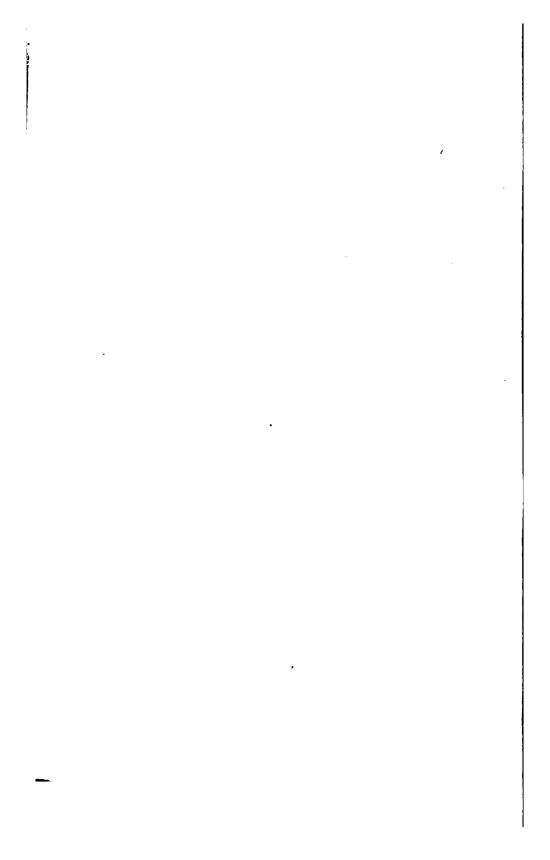

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

Mathematical T A B L E S,

Contrived after a most Comprehensive Method:

VIZ. Honry Hopkey

A TABLE of Logarithms, from 1 to 101000. To which is added (upon the same Page) The Differences and Proportional Parts, whereby the Logarithm of any Number under 10,000,000 may easily be found.

TABLES of Natural Sines, Tangents and Secants, with their Logarithms, and Logarithmick Differences to every Minute of the Quadrant.

TABLES of Natural Versed Sines, and their Logarithms, to every Minute of the Quadrant.

WITH THEIR

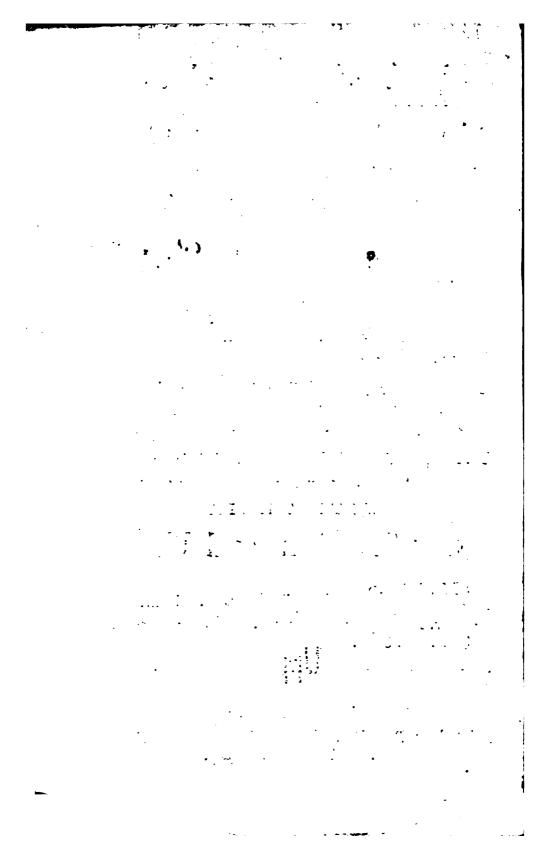

Construction and Use.

Mr. Briggs, Savilian Professors of Geometry & Mr. Halley, the University of Oxford.

Mr. Abr. Sharp.

LONDON:

Printed for R. and W. Mount, and T. Page, in Postern-Row, Tower-Hill. 1717.

Menofine

To Mr. Edm. Halley, Savilian Professor of Geometry, in the University of Oxford.

SIR,

that by the Learned Professors of Geometry in the Savilian Chair (viz. Mr. Briggs, Dr. Wallis, and Your Self) the Logarithmical Art hath received its greatest Improvements, and the Use of those Numbers have by them been fully taught and divulged. Tis to You therefore, who succeed, and share equally with your Famous Predecessors in the same honourable Post (and in Memory of them) that I think my self bound in Justice to present these Collections.

Mr. Briggs, with excessive Patience, Calculated Thirty one Chilisds of these Decimal Logarithms, to Fourteen Places, also the Sines, Tangents, Secants, with the

A 2

Loga-

The Dedication.

Logarithm Sines and Tangents, and shewed their Construction and Use; of which Dr. Wallis gives a particular Account in the Twelsth Chapter of his Alge-

bra, which is our Introduction.

Then I return you your own Compendious and Facile Method of Conftructing the Logarithms, with the Reverse of that Noble Problem: And indeed, setting aside what is Printed from Mr. Briggs above-mentioned, or Mr. Abr. Sharp (to whom the World is indebted for their Industry in this kind) the rest of the Discourses, both before and after the Tables, are either Written or Chosen by your self; therefore I expect your kind Acceptance, and remain,

Sir, Your very much Obligid

Humble Servant,

Zonden, July 12. 1705.

Hen. Sherwin.

THE

THE

PREFACE

TERE the Construction and Use of the following Tables known to every body, they should come forth into the World without any Introductory Dif. course; but as the Gase stands, and that Knowledge is the share but of fem, it may be proper to add something upon both thase Heads: And what is here presented is Gathered from the most Gelebrated Authors that bave Improved these Subjects among st our selves, viz. Mr. Briggs, Dr. Wallis and Mr. Halley, the Three Professors of Geometry in the Savilian Chair at Oxford: To lead the Reader on from the beginning, we give bim the 12th Chapter of Dr. Wallis's Algebra, which treats of the Original of Logarithms, and gives a full History of their Progress. To this is subjoyn'd Mr. Halley's Compendious Method of making Logarithms, which proceeds abstractedly from the nature of Numbers without any regard to the Hyperbola; from which is deduced for Practice the making of the Natural, and Mr. Brigge's: With the further Prosecution of the same Subject, generously Communicated by the ingenious and unwearied Mr. Abr. Sharp, with his Table of Logarithms to above fifty Figures

The PREFACE.

Figures; as also the Hyperbolick Logarithm of 10 to 80, and its Reciprocal, to 65. Then follows by the same Hand, the Construction of the Sines, Tangents and Secants; with the whole Process of the Quadrature of the Circle to 72 Figures: Which Quadrature was invented, and here demonstrated, by the above-mentioned Mr. Halley.

To come to the principal Part of the Performance; as to the Tables, we may wenture to say (without Partiality) that we offer here a more compleat Set of them than can be found in any other Book now Extant, and doubt not, but upon careful Perusal, they will be found as Useful and Correct. The Method we observed in Printing the Logarithms is according to that Excellent Abbreviation of Dr. John Newton in his Trigonometria Brittannica; to which is added, the Difference between each Logarithm, and the proportional Parts, in the last Column of the same Page; by which the Logarithm of any Number (& contra) under 10,000,000 may be readily found, without turning to any other Page.

The manner of placing the Tables of natural Sines, Tangents and Secants, and their Logarithms, is abfolutely New, and very Advantagious; for to each Logarithm in those Tables are placed the differences which are common to the Column of Logarithms on both sides: By which the Seconds may be easily found. And for that end, between them and the Table of Logarithms, is placed a small Table to convert Sexagesimals into Decimals, and contrarily.

The PREFACE.

The next and chief thing confiderable in the Tables, is their Correctness; and here we will give a particus lar Account of the Measures we took to make them so. As for the Table of Logarithms it was examined from I to 20000 and from 90000 to 101000 by Mr. Briggs's Arith. Logar. Printed at London 1624, and from 1 to 100,000 by Adrian Vlacq's Table, Printed at Goudæ 1628. And to shew our Care herein, as well as for Publick Service, we here place a Table of the Errors. we found (when Correcting our own) in Mr. Briggs's and Vlacq's above-mentioned Canons; and because Vlacq's own Errata Table is found in few of his Books (insomuch that Dr. Newton's above-mentioned Canon is Printed with all his Errors) therefore we thought it necessaby to give it here with our Additions. Where Note. that such of his Errors as we now found are marked with (a), and a single one in Mr, Briggs's with (b); and those which are Common to Mr. Briggs and Vlacq are marked with (B.)

The PREFACE

The Tables of Natural Sines, Tangents and Secants were examined by those of Van Shooten, Printed at Amsterdam 1627 (which are said to be without one Fault) and Sir Jonas Moor's new System; the Tables of Logarithmick Sines, Tangents and Secants were examined by a Table of the said Vlacqs, in large Octavo, Printed at Goudæ 1626, as also by the said System. And in all these Examinations there were never less than Two to harken, whilst One read over the Printed Sheet to be Corrected. The Table of Versed Sines was Printed from, and examined by the System above-mentioned, they being to be found no where else that I know of.

The Travers Table is new Calculated to a larger Radius than any Extant, and was examined with the

greatest Care.

After the Tables follow the various Uses of Logarithms made plain to the meanest Capacity; To which is added, the Solution of Plain and Spherical Trigonometry by Logarithms, from Mr. Briggs's English Edition of his Logarithmical Arithmetick; and the Use of the Versed Sines from Sir Jonas Moor's above-mentioned System.

The Demonstration of Compound Interest, with some Propositions of Navigation, were both of them bestowed by Mr. Halley, and revised by him; as were most of the Sheets of the whole Discourse: wherein he was pleased to make many advantagious Alterations, for

which I return him my hearty Thanks.

ERRORS in the Discourses before the TABLES.

O F

LOGARITHMS,

THEIR

Invention and Use.

The XIIth Chapter of that Excellent Treatise of Algebra; Written by the late Reverend and Learned Dr. John Wallis, Savilian Professor of Geometry in the University of Oxford; and a Member of the Royal Society in London,

Ogarithms was first of all Invented (without any Example of any before him, that I know of) by John Neper, Baron of Merchiston in Sociend; and by him first Published at Edenburgh, in the Year 1614: And soon after by himself (with the Assistance of Henry Briggs, Professor of Geometry, first at London in Großham-Colledge, and afterwards at Oxford) reduced to a better Form, and perfected.

The Invention was greedily embraced (and deservedly) by

Learned Men.

Mr. Briggs, upon the first Publication of it, was so pleased with it, that he presently repaired into Scotland, to consult the Author, advise with him, and be assistant to him, in the perfecting of it, and in Calculating Tables for it; which was a Work of great Labour, as well as subtile Invention.

And it was imbraced and promoted abroad by Renjamin Ura finine, John Kepler, Adrian Vlacq, Petrus Cragerus, and others.

And at home, by Henry Gellebrand, who perfected the Trigonomaria Britanica, which Mr. Briggs began, but died before it was

So that, in a fhort time, it became generally known, and greedily imbraced in all Parts, as of unspeakable Advantage; especially for Ease and Expedition in Trigonometrical Calculations.

The 12th Chapter of Dr. Wallie's Algebra:

The Foundation of it is this:

If to a Rank of Continual Proportionals in a Geometrical Progression from 1: Suppose

We accommodate a Rank of Exponents in an Arithmetical gression, from o: Suppose

It is manifest, that for every Multiplication or Division of those Terms one by another, there is an answerable Addition or Subduction of the Exponents.

For as (in the Terms) 4 Multiplied by 8 makes 32, so (in the Exponents) if to 2 we add 3, it makes 5; and as 32 divided by 8, gives 4: So if from 5 we Subduct 3, there remains 2: And so every where.

Exponents. 0. 1. 2. 3. 4. 5. 6.

And the same holds, if between any two of those Terms, interpose one or more Means Proportional; and between their Exponents, as many Arithmetical Means.

As if between 4 and 8 (or between 2 and 16) we interpose a Mean Proportional $\sqrt{32}$, that is $4\sqrt{2}$; and between 2 and 3 (or 1 and 4) an Arithmetical Mean, $2\frac{1}{5}$; then as $4\sqrt{2}$ by 8 makes $32\sqrt{2}$, (a Mean Proportional between 32 and 64:) So adding their Exponents $2\frac{1}{5}$ and 3, makes $5\frac{1}{5}$, an Arithmetical Mean between 5 and 6: And so every where.

And universally, (whatever he the Values of r. c.) supposing

The Terms, 1. r. rp. rpr. r^4 . r^5 . r^6 . r^6 . r^6 . Expenses, 0. e. 2e. 3e. 4e. 5e. 6e. r^6 . Then, as $r^7 \times r^7 = r^5$, and $r^7 \vee r \times rrr = r^5 \vee r^5$. So $r^6 = r^6 + 3e = r^6$, and $r^7 \vee r \times rrr = r^5 \vee r^5$. And so every where.

And confequently whatever Term we interpole between any of those Continual Proportionals; if we also interpole between their Exponents, a like Arithmetical Mean, as that is a Proportional Mean, (as if that be the First or Second of two Means Pro-

Proportional, this accordingly the First or Second of two Means Arithmetical; if that the Second of Five Means Proportional, this the Second of as many Arithmetical Means, &c.) Then to every Addition or Subduction of these one with another, will answer a like Multiplication or Division of those.

And if for 0, 4, 2e, 3e, &c. (taking e=1) we put, 0, 1, 2, 3, &c; then doth this Exponent always give us the Number of

Rations or Dimensions in the Term to which it belongs.

(As 3 in r', 6 in r', and so every where) or shews, How many fold (quam multiplicata) the Proportion (for Instance) of r' to 1, is of r to 1. That is, how many Rations or Proportions of r to 1, are compounded in r' to 1, to wit 6. To which the Name Logarithmum sitty answers; that is, Noyam a polyuoq, the Number of Proportions so Compounded.

Now this Foundation being laid, their Design in the Logarithms is this: Having selected (as most convenient) a Rank of Continual Proportionals, in a Decuple Progression; to wit,

1. 10. 100. 1000. 10000. 100000. Oc.

They fit hereunto (as their Exponents) in Arithmetical Progression,

(And consequently, the Logarithm of any Fractions less than 12, is to be a Negative Number.) And then, for each of the Numbers interposed between 1 and 10, between 10 and 100; and so of the rest; (as 2, 3, 4, &c. 11, 12, 13, &c.) they seek out (between 0 and 1, between 1 and 2, &c.) at Exponent (to be expressed in Decimal Parts) which is such a Mean Arithmetical, as the other is a Mean Proportional.

And these Exponents they call Logarithms, which are Artificial Numbers, so answering to the Natural Numbers, as that the Addition and Subduction of these, answers to the Multiplication and

Division of the Natural Numbers.

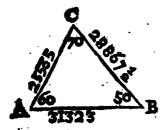

By this means, (the Tables being once made) the Work of Multiplication and Division is performed by Addition and Subduction; and consequently that of Squaring and Cubing, by Duplation and Triplation; and that of Extracting the Square and Cubick Root, by Bisection and Trisection; and the like in higher Powers.

The 12th Chapter of Dr. Wallis's Algebra :

Of these Logarithms we have Printed Tables, for all Numbers is far as One Hundred Thousand. So that, if any two Numbers (not exceeding 100,000) be proposed to be Multiplied or Distinct one by the other, the Logarithms of those Numbers (to be found in those Printed Tables) being accordingly Added or Subducted, will give the Logarithm of that Natural Number (to be found by those Tables) which is the Product or Quotient of such Multiplication or Division. And the Double or Treble of such Logarithm, is the Logarithm of its Square or Cabe. And the Half, or Third Part of it, is the Logarithm of its Quadratick or Cubick Root; and the like of Higher Powers, which in large Numbers, is matter of great Expedition.

And (because a main End of this Defign, was to facilitate Astronomical and other Trigonometrical Calculations) beside those Logarithms for Numbers in their Natural Order, we have also Tables of Artificial or Logarithmical Sines, Tangents, and Secants; the Addition and Subduction of which, answers to the Mulplication and Division of the Natural Sines, Tangents, and Secants: Which is a very Compendious Advantage for Expediting such Calculations; and is not less accurate than the Operation

by Tables of Natural Sines, Tangents, and Sevants.

Thus in a plain Triangle; supposing the Angles given, A 60 Degrees, B 50 Degrees, (and consequently, C 70 Degrees) and the Side AB 31323 Paces: For finding the Sides AC, or AB, we have this Proportion:

As the Sine of C, 70 Degrees,
To the Sine of B, 50 Degrees,
So is the Side AB,
To the Side AC,

9396926
7660444
31313
pacere
25535—pacere

For finding which, we are to Multiply 7660444 by 31323, and then Divide by 9396926; which gives for the Side AC (at most) 25535 paces.

And, As the Sine of C, 70 Degrees 9396926

To the Sine of A, 60 Degrees, 8660254

So in the Side AB, 31323 paces.

To the Side BC. 28867½ paces.

For finding which, we are to Multiply 8660254 by 31323,

and Divide by 9395926, which gives for the Side BC, 288672 paces, proxime.

Now (to prevent these tedious Multiplications and Divisions)

by Logarithms, we proceed thus;

Log. Sine C, 70 Degrees - 9.9729858 Ar. Co. 0.0270142
Log. Sine B, 50 Degrees + 9.8842540
Log. A B, Num. 31323 + 4.4958633
Log. A C, Num. 25535 + 4.4071315
74.4071315

Where Subducting the First Logarithm from the Sum of the Second and Third, gives the Fourth; which (the Table tells us) answers to the Number 25535, fere. So many Paces therefore is the Side AC. Again,

Log. Sine C, 70 Degrees, - 9.9729858 Ar. Co. 0.0270142
Log. Sine A, 60 Degrees, + 9.9375306
Log. AB. Num. 31323 + 4.4958633
Log. BC. Num. 288671 + 4.4604081

24.4604081

Where Subducting the first Logarithm, from the Sum of the Second and Third, gives the Fourth; which (the Table tells as) answers to the Number 28867; proxime: So many Paces therefore is the Side BC; which Operations are much more Expeditions, than Multiplying and Dividing such large Numbers.

And in like manner, in Spherical Triangles, fave that there all the Logarithms are to be taken out of the Tables of Sines, Tangents, and Seconts; which, in this Example, are taken partly from thence, partly from the Table of Numbers; but the Ex-

pedition is alike in both.

This was first Published by the Lord Neper (the first Inventor of it) in the Year 1614, under the Title of Mirificus Logarithmorum Canon, with its Description and Use; but reserving the Manner of Construction, and its Demonstration, to be after Published: This being but an Essay, set forth, to see the Judgment of Learned Men concerning this Design, and how it was like to be received.

In this we have a Canon or Table of Natural and Logarithmical Sines, for each Degree and Minute of the Quadrant.

And whereas it was at his Choice to give to what Number he pleafed the Logarithm o, and whether to proceed by way of Increase or Decrease, he chose to make o the Lagarithm of the whole Sine tooocooo, that so the Multiplication or Division by the whole Sine (frequent in Trigonometrical Calculation) might be dispatched without trouble, requiring here but the Addition of Subduction of o

And '

And because the Use of Lesser Sines and Numbers, less than the Radius or whole Sine, were likely to be of more frequent Use, than of Tangents, Secants, and other Numbers greater than the Radius, he chose to give to those lesser Numbers Affirmative Logarithms (increasing the Logarithms from 0, as the Signs decrease) which he calls Abundances: And consequently Negative Logarithms (which he calls Desembles) to greater Numbers. Designing those by 1, these by—.

And by this means, he directs how this Table of Sines (with the Differences there inferted) may serve also for a Table of Tangents and of Secants; So that this Canon, is a Compleat Canon of Natural Sines, and of Logarithmical Sines, Tangents, and Secants.

He shews also how this Table may be applied to the Logarithms of Absolute Numbers; but because with some trouble, he reserves

the fuller account hereof to a farther Treatife.

In the Year 1619, the Lord Neper being then dead, the same was again Published by his Son Robert Neper; with some Posthumous Treatises of his Father, concerning the Construction of this Logarithmical Canon, and concerning his Design (after Communication had with Mr. Briggs) of changing the Form of Logarithms, making o to be the Logarithm of 1; (of which he had before given notice in the Presace to his Rabdalogia, Published in the Year 1617;) and concerning some things pertaining to Trigonometry; with some Lucubrations of Mr. Briggs's on the same Subject.

But the Lord Neper being dead, the whole Work was devolved on Mr. Briggs, who (according to their joint Advice) making the Logarithm of 1 to be 0, and of 10, 100, 1000, &c. to be 1, 2, 3, &c. which he calls Indices, or Characteristicks, and which we may repute as Integer Numbers, with Fourteen Ciphers annexed, which we may repute as so many places of Decimal Fractions, below the place of Units, or of the Characteristick: Andbetween these he sits the Intermediate Logarithms for the In-

termediate Numbers.

And consequently, the Logarithm of 1 being 0, the Logarithm of Fractions less than 1, or of Numbers intermediate between 1 and 0, must be Negative Numbers, or Numbers less than 0, (which he calls Defective Logarithms, denoted by— (the Note of Negation) prefixed.

Now these Defective Logarithms may be two ways expressed; either so as that the Note of Negation shall affect the whole Logarithm, or so as to affect only the Characteristick, (leaving the rest of the Logarithm to be understood as Assirmative.)

As for Example, The Fraction 3, or (which is equivalent)
0.375. This Fraction supposed the Numerator 3 to be Divided

the Denominator 8, which in Logarithms is to be performed by Subtracting Log. 3. 0.4771213 the Logarithm of 8, from that of 3, and Log. 8. 0.9030900 the Remainder will be the Logarithm of Log. 2. -0.4259687

ber, -0.4259687.

Or thus; for as much as the Logarithm of 375, (supposing it to be an Integer Number) is 2.5740313. And the depressing this to the First, Second, or Third, or further place of Decimal Fraction, doth (without altering the Figures) divide the Value by 10, 100, 1000, &c. which in Logarithms is done by Subtracting 1, 2, 3, &c. from the Characteristick, or place of Integers, (1, 2, 3, &c. in that place,

being the Logarithms of 10, 100, Log. 3750 3.5740313 1000, &c.) Such Alteration of the Log. 375 2.5740313 Value (the Figures remaining) is Log. 3715 1.5740313 done by altering the Characteristick 3175 Log. 0.5740313 of the Logarithm, without varying Log. 0 375 1.5740313 the other Figures, in this man-Log. 00375 ner.

Which two Forms, tho' they seem different, and some may rather choose the one, some the other; or in some Cases the one, and in some Cases the other; yet they are in Substance or Value the same. For

> +0.5740313 is =--0.4259687

And every one is left to his liberty, whether of the two ways (or what other equivalent thereunto) he shall please to use.

In this Method Mr. Briggs hath calculated a Table of Logge rithms, (Published in the Year 1624) for 20 Chiliads of Absolute Numbers, (from 1 to 20,000;) and again for 10 more (from 90,000, to 100,000,) and one Chiliad Supernumerary (to with the Hundred and First Chiliad) that is 31 Chiliads in all.

Before which is prefixed, a large Account of the Nature and Construction of this Logarithmical Canon, and the Uses thereof; and Direction how to Supply the intermediate Chiliads, which are here wanting. The whole Intituled, Arithmetica Logarithmica.

The same was again Published in 1628, by Adrian Vlacq (or Flack,) with a Supplement (as Mr. Briggs directed) of the Chiliads before omitted; that is, in all, of 100 Chiliads, with one Supernumerary. But in shorter Number, extended but to 10 places below that of the Integers, or the Characteristick. And he subjoins also a Logarithmical Cannon of Sines, Tangents, and Secants.

Secants, (for Degrees and Minutes of the Quadrant) of as med

my places.

Mr. Briggs proceeded to Calculate a Trigonometrical Canona Logarithmical, suited to that for Absolute Numbers, to the Logarithms, extending (as inthat other) to 14 places, beside the Characteristick. And having before Calculated a Table of Natural Sinks, Tangents, and Secants, (for Degrees and Centesines of Degrees) in Numbers extending to 15 places, he fitted there unto a Canon of Logarithmical Sines and Tangents, (because those of Secants might be spared;) and a Treatise prefixed, concerning the Construction thereof, with other things pertinent thereuntos intending a farther Treatise concerning the Use of it.

But dying before this last was finished, or the rest published, Mr. Henry Gellibrand supplied this latter, and Published the whole, with the Title of Trigonometria Britanica, in the Year 1633, To which is subjoined another Canon of Logarithmical Sines and Tangants, by Adrian Flatq, for Degrees, Minutes, and Tenth Seconds, extending (as his former did) to 10 places, beside the Characteristick; and Mr. Briggs's 20 Chiliads for Logarithms of

Absolute Numbers.

So that the whole Doctrine of Logarithms was by this time fufficiently perfected, with convenient Canons or Tables fitted thereunto, in large Numbers: Of which also Petras Crugerus gives an Account in the Preface to his Trigonometria Logarithmica, Printed in the Year 1634; with his Logarithmical Tables, but in shorter Numbers.

And the Tables of Logarithms above mentioned, (for 100 Chiliads of Absolute Numbers, and for Sines and Tangents to Degrees and Centesmes) were the same Year 1633, contracted into a Lesser Form, and more Manageable (but in shorter Numbers, the former not extending to above 7 places, beside the Characteristick, but the latter to 10) by Nathaniel Ros; with Directions for the Use of them (in Trigonometry, Geometry, Astronomy,

Geography, and Navigation) by Edmund Wingate.

In the mean time, Renjamin Orsmus did also publish Tables of Logarithms, in the Year 1618; and again in the Year 1625, in his Trigonometria; and Johannes Koplerus also in the Year 1624, in his Chilias Logarithmorum (which he applies also to his Rudolphine Tables, published in 1627;) and Claudius Basschius about the same time, or soon after: And Goorgius Ludovicus Frobenius, in the Year 1634, (and perhaps some others.) But all or most of them, in short Numbers; and conformable to the Lord Neper's sirst Design; not to that Form which, upon second Thoughts, he and Mr. Briggs agreed upon as most Eligible, and which hath since been received in common practise.

· Since which time, much hath not been added to the Doctrine of Logarithms; nor was it necessary, that Work having obtained

lufficient perfection.

But in case Logarithms, on any emergent occasion, be desirable with greater Exactness, and in larger Numbers than those Printed Tables do afford: Mr. Nicolas Mercator, in a small Treatise called Ligarithmotechnia, Printed in the Year 1668, shews (with great fubtilty) how it may be effected, in Numbers of whatever length defirable, with much more ease than heretofore,

Those that would see more of the Construction and Use of Logarithms, may confult the fore-mentioned Authors, elbesially Brigg's Arithmetica Logarithmica, and the Trigonometria Britamica of Briges and Gellibrand; as also, what Adrian Place and Peter

Crugerus have writ upon this Subject.

But one thing yet feems to be wanting to the more complease Management of the Logarithmical Canon: For tho' there be a Canon of Logarithms for Natural Numbers, beginning from 1 to 100,000, so that the Logarithm may be had by the bare Inspection of the Canon; yet it is not allke easie to find the Number agreeing to a Logarithm given; but the nearest Logarithms on both sides being found, they are to be Corrected by the Parts Proportional, that for

Note, That which follows, not being in Dr. Wallis's English Edition but continu'd in the 12th Chap. of his Latin one, is from thence done into Englifb By Mr. Dittou.

there may be found some Intermediate Number that may agree to the Logarithm given: To prevent which Inconvenience. there feems to be necessary an Anti-Logarithmick Canon; in which, the Logarithms being placed down in order, from t to 100,000, the Natural Numbers, answering to them, should be placed by them: So that by this Canon we might find the Number for any Logarithm, with the same Ease that we find the Logarithm for any Number by the Canon that we have.

And indeed, such a Canon hath been Constructed for many Years, but never yet made Publick. I don't know whether Mr. Thomas Harriot began that Canon, or no; but Mr. Walter War. wer had his Papers, and from them put forth his Algebra, A. D. 1631, and gave hopes of Publishing many things more. And the same Warner did, not long after, finish the said Canon (if at least he did not first begin it) and made it ready for the Press; and all this, I believe, about Fifty Years ago, if not more.

And this I was told lately by Dr. John Pell; who was intimately acquainted with Mr. Warner, and had affifted him in the Calculation. I remember also, that I saw that Work (and did but see it) among other Papers of Mr. Harriot or Warner, and

that now almost Thirty Years ago: What became of them after, I knew not, till I heard lately from Dr. Pell, that they were in the Hands of the Celebrated Dr. Richard Busbey, Master of Westminster School for many Years, and now very Old; who also gave me hopes of its coming forth in a little while, by the Care of Dr. Pell, if at least (to which I yielded without much difficulty) I would succeed Dr. Pell in that Care, if he should happen to die before the Work was finished. But Dr. Pell is dead, and that very Old, he dying about the Year 1685, the Edition of that Work being not so much as begun. And I fear, lest (Dr. Busbey dying also) this thing be quite lost; especially fince there is none that will be willing to be at the Expence of the Edition.

As to the Use of Logarithms, altho' they were invented chiefly to facilitate Trigonometrical Calculations; yet they are of Use,

| whe | re-ever there is | any occasion for Multiplication or Division. |
|--------------|------------------|--|
| | | Thus in the Business of Anatocism, or Com- |
| 0 | 15 875 | pound Interest, Ex. Gr. At the Rate of 6 in |

18 s. 10, d. nearly.

tinued in that same Proportion for 12 Years;

Therefore the Number 15.875, is to be continually Multiplied by 1.06 twelve times 3

from whence arises 31.943621. that is 31 1.

2814297072

1 7057824-

30/1354896-

1 8081294

31,9436190-

Now

Now the same is more expeditionsly done by the Logarithms. The Num. 1.06, expressing the Rate of Interest, its Log. is This Multiplied twelve, times, according to the 30.303669 Number of Years, is ——— The Log. of 15.875 (the Principal) is-1.2007137 Both these added together, make the Lagarithm To which answers the Absolute Number 31,94362, that is 31 l. 18 s. 10¹ d. nearly, as before. Contrarywise, if giving the Time and Rate of Interest (as before) together with the Sum arising, viz. 31,94362, it be enquired. from what Principal this must arise. Then the Log. of the Sum arising is — From whence Substract twelve times the Log. of {0.3036696 1.06, which is _____ And there Remains the Log. of the Principal defired, viz. 13.876, whose Log. is ---But then, if from the fore-mentioned Log. of the Sum arising, viz. 31.94362, which is — We Substract the Log of the Principal, which is 1:2007137. Then the Remainder, which is - 0.303669**6**. Divided by 12 (the Number of Years) will bring 0.0253058 Which is the Log of 1.06, the Rate of Interest. Also, the said Remainder, which is -0.3036696

Divided by the Log. of the Interest, which is -

Will give 12 in the Quotient, which is the Num-

ber of Years, in which such a Sum wou'd arise, from such a Principal, according to such a Rate of Interest.

And after the same manner (mutatis mutandis) may other Questions, relating to Anatocism, be solv'd; such as Oughtred has

succinetly proposed in the Additions to his Clauis.

Likewise thus may one proceed in that known Question, about the continual doubling of an Unite; which uses to be propos'd concerning a Horse which should be Sold according to the Number of Nails in his Shoes. For fetting the first Nail at a very inconsiderable Price, and the second at double the Price of the first, and the third at double the Price of the second; and so going on, continually doubling for every Nail; We shall come at last to a vastly great Sum-

The first Occasion of which Question, I believe to be what I have cited, Cap. 31. of my Opus Arithmeticum, from Alsephad (an Arabick Writer) in his Commentaries upon Tograius's Verses: Namely, That one Seffa an Indian having first found out the Game at Cheffe, and shew'd it to his Prince Shehram: The King, who was highly pleas'd with it, bid him ask what he would for the

Reward of his Invention; whereupon he ask'd, That for the first little Square of the Chesse-board, he might have one Grain of Wheat given him; for the second, two; and so on doubling continually, according to the Number of Squares in the Cheffeboard, which was 64. And when the King, who intended to give a very Noble Reward, was much displeas'd, that he had ask'd fo trifling a one; Seffa declar'd, That he would be contented with this small one. So the Reward he had fix'd upon, was order'd to be given him: But the King was quickly Aftonish'd, when he found that this would rife to fo valt a Quantity, that the whole Earth it self could not furnish out so much Wheat. But how great the Number of these Grains is, may be found by doubling one continually 63 times, fo that we may get the Number that comes in the last place; and then one time more yet, to have the Sum of all. For the double of the last Torm (less by one) is the Sum of all. Now this will be more Expeditiously done by Logarithms, and Accurately enough too for this purpose. For if to the Log. of 1, which is 0, we add the Log. of 2 (which is 0.3010300) Multiplied by 64; that is 19436 (9200; the Absolute Number agreeing to this, will be greater than 18446.00000.00000.00000, and lefs than 18447.00000,00000.00000

Philosophical Transaction, Number 216.

A Most Compendious and Facile METHOD

Constructing the Logarithms,

Exemplified and Demonstrated

From the NATURE of NUMBERS, Without any Regard to the Hyperbola:

With a Speedy METHOD for Finding the NUMBER from the LOGARITHM given.

By Mr. Edm. Halley, Present Savilian Professor of Geometry in the University of Oxford; and Fellow of the Royal Society in London.

HE Invention of the Logarithms is justly esteemed one of the most Useful Discoveries in the Art of Numbers, and accordingly has had an Universal Reception and Applause: And the great Geometricians of this Age have not been wanting to Cultivate this Subject with all the Accuracy and Subtilty a Matter of that Consequence doth require; and they have demonstrated several very Admirable Properties of these Artisticial Numbers, which have render'd their Construction much more Facile, than by those operose Methods, at first used by their truly Noble Inventer, the Lord Nepair; and our worthy Country-Man, Mr. Briggs.

But notwithstanding all their Endeavours, I find very sew of those, who make constant Use of Logarithms, to have attained an Adequate Notion of them; to know how to Make or Examine them, or to understand the Extent of the Use of them. Contenting themselves with the Tables of them, as they find them, without daring to Question them, or caring to know how to Rectifie them, should they be found amis; being, I suppose, under the Apprehension of some great Difficulty therein. For the sake of such, the following Tract is principally intended;

but not without hopes, however, to produce something that may

be acceptable to the most knowing in these matters.

But first, it may be requisite to premise a Definition of Logarithms, in order to reader the ensuing Discourse more clear; the rather, becanse the old one, Numerorum proportionalium aqui differences comites, seems too scanty to define them fully. may much more properly be faid to be Nameri Rationem Exponentes: Wherein we consider Ratio as a Quantitas sui generis, beginning from the Ratio of Equality, or 1 to 1=0; being Affirmative, when the Ratio is increasing, as of Unity to a greater Number; but Negative, when decreasing: And these Rationes we suppose to be measured by the Number of Ratiuncula, contained in each. Now these Ratiuncula are so to be understood, as in a continued Scale of Proportions, infinite in Number between the two Terms of the Ratio; which infinite Number of Mean Proportionals is to that infinite Number of the like and equal Ratiuncula between any other two Terms, as the Logarithm. of the one Ratio is to the Logarithm of the other. Thus if there be supposed between 1 and 10 an infinite Scale of Mean Proportionals, whose Number is 100000 &c. in infinitum; between 1 and 2 there shall be 30102 &c. of such Proportionals, and between 1 and 3 there will be 47712 &c. of them; which Numbers therefore are the Logarithms of the Rationes of 1 to 10, 1 to 2, and 1 to 3; and not so properly to be called the Logarithms of 10, 2 and 3.

But if instead of supposing the Logarithms composed of a Number of equal Ratiuncula, proportional to each Ratio; we shall take the Ratio of Unity to any Number, to confift always of the fame infinite Number of Racinneula, their Magnitudes in this case, will be as their Number in the former. Wherfore if between Unity and any Number propos'd, there be taken any Infinity of Mean Proportionals, the infinitely little Augment or Decrement of the first of those Means from Unity, will be a Raciondula, that is, the Momentum or Fluxion of the Ratio of Unity to the faid Number: And seeing that in these continual Proportionals all the Rationcule are equal, their Sum, or the whole Ratio, will be as the said Momentum is directly; that is, the Logarithm of each Ratio will he as the Fluxion thereof. Wherfore, if the Root of any Infloite Power be extracted out of any Number, the Differentiala of the faid Root from Unity, shall be as the Logarithm of that Number. So that Logarithms, thus produced, may be of as many Forms as you please, to assume infinite Indices of the Power whole Root you feek: As if the Index be supposed 100003 of or infinitely, the Roots shall be the Logarithms invented by the Lord Neper; but if the said Index were 2302585 &c. Mr. Briggs's Logarithms would immediately be produced. And if you please to flap at any Number of Figures, and not to continue them on, it will suffice to assume an Index of a Figure or two more than your intended Logarithm is to have; as Mr. Briggs did, who, to have his Logarithms true to 14 places, by continual Extraction of the Square Root, at last came to have the Root of the 140737488355328th Power; but how operose that Extraction was, will be easily judged by whoso shall undertake to Examine his Calculus.

Now, tho' the Notion of an Infinite Power may seem very strange, and (to those that know the Difficulty of the Extraction of the Roots of High Powers) perhaps impracticable; yet by the help of that Admirable Invention of Mr. Newton, whereby he determines the Uncia, or Numbers prefix'd to the Members composing Powers (on which chiefly depends the Doctrine of Series) the Infinity of the Index contributes to render the expression much more easie: For if the Infinite Power to be Resolved be put (after Mr. Newton's Method)

 $\frac{1}{p+pq}, \frac{1}{p+pq} \stackrel{\text{if }}{=} \text{or } \frac{1}{1+qm}, \text{ instead of } 1 + \frac{1}{mq} + \frac{1-m}{2mm}qq + \frac{1-m}{6m^3}q^3 + \frac{1-6m+11mm-6m^3}{24m^4}q^4 \in s. \text{ (which is the Root)}$

when m is finite) becomes $1+\frac{1}{m}q-\frac{1}{2m}qq+\frac{1}{3m}q^3+\frac{1}{4m}q^4+\frac{1}{5m}q^5$ &c. m m being infinite infinite, and confequently whatever is divided thereby vanishing. Hence it follows, that $\frac{1}{m}$ Multiplied into $q-\frac{1}{2}q+\frac{1}{2}q+\frac{1}{2}q^4+\frac{1}{2}q^5$ &c. is the Augment of the first of our Mean Proportionals between Unity and 1+q, and is therefore the Logarithm of the Ratio of 1 to 1+q; and whereas the Infinite Index m may be taken at pleasure, the several Scales of Logarithms to such Indices, will be as $\frac{1}{m}$ or Reciprocally as the Indices. And if the Index be taken 10000 &c. as in the case of Neper's Logarithms, they will be simply $q-\frac{1}{2}q+\frac{1}{2}q^4+\frac{1}{2}q^5-\frac{1}{2}q^6$ &c.

Again, if the Logarithm of a decreasing Ratio be sought, the

Again, if the Logarithm of a decrealing Ratio be lought, the Infinite Root of 1-q, or 1-q/m is $1-\frac{1}{m}q-\frac{1}{2m}q^2-\frac{1}{3m}q^3-\frac{1}{3m}q^3-\frac{1}{6m}q^6$ &c. whence the Decrement of the first of our Infinite Number of Proportionals will be $\frac{1}{m}$ into $q+\frac{1}{2}qq+\frac{1}{3}q^3+\frac{1}{4}q^4+\frac{1}{3}q^5+\frac{1}{6}q^6$ &c. which therefore will be as the Logarithm of the Ratio of Unity to 1-q. But if m be put 10000 of then the faid Logarithm will be $q+\frac{1}{2}qq+\frac{1}{3}q^3+\frac{1}{4}q^4+\frac{1}{3}q^5$. Hence

Mr. Halley's Compendious and Facile Method

Hence the Terms of any Rais being a and b, q becomes or the Difference divided by the lesser Term, when tis an increasing Ratio; or ban when 'tis decreasing, or as b to a. Whence the Logarithm of the same Ratio may be doubly exprest, for putting x for the Difference of the Terms a and by it will be either

$$\frac{1}{m} into \frac{x}{b} + \frac{x^{2}}{2bb} + \frac{x^{3}}{3b^{3}} + \frac{x^{4}}{4b^{4}} + \frac{x^{5}}{5b^{5}} + \frac{x^{6}}{6b^{6}} &c. or$$

$$\frac{1}{m} into \frac{x}{a} - \frac{x^{2}}{2aa} + \frac{x^{3}}{3a^{5}} - \frac{x^{4}}{4a^{4}} + \frac{x^{5}}{5a^{5}} - \frac{x^{6}}{6a^{6}} &c.$$

But if the Racio of a to b be supposed divided into two parts. viz. into the Ratio of a to the Arithmetical Mean between the Terms, and the Ratio of the faid Arithmetical Mean to the other Term b, then will the Sum of the Logarithms of those two Rationes be the Logarithm of the Ratio of a to b; and substituting \(\frac{1}{2} \), instead of \(\frac{1}{2} \) \(\frac{1}{2} \) \(\frac{1}{2} \), the said Arithmetical Mean, the Logarithms of those Rationes will be, by the foregoing Rule,

$$\frac{\frac{1}{m} \ln \frac{x}{z} + \frac{xx}{2zz} + \frac{x^3}{3z^3} + \frac{x^4}{4z^4} + \frac{x^5}{5z^5} + \frac{x^6}{6z^6} &c. and}{\frac{1}{m} \ln \frac{x}{z} - \frac{xx}{2zz} + \frac{x^5}{3z^3} - \frac{x^4}{4z^4} + \frac{x^5}{5z^5} - \frac{x^6}{6z^6} &c.}$$
the Sum $\frac{1}{m} \frac{2x}{z} + \frac{2x^3}{3z^3} + \frac{2x^5}{5z^5} + \frac{2x^7}{7z^7} &c. will be the$

Logarithm of the Ratio of a to b, whose Difference is x, and Sum z. And this Series converges twice as swift as the former, and therefore is more proper for the Practice of making of Logarithms: Which it performs with that Expedition, that where athe Difference is but the Hundreth Part of the Sum, the first

ftep $\frac{2x}{x}$ fusfices to Seven Places of the Logarithm, and the second

step to Twelve. But if Brigg's sirst Twenty Chiliads of Logarithms be supposed made, as he has very carefully computed them, to Fourteen Places, the first step alone is capable to give the Logarithm of any intermediate Number true to all the places of those Tables.

After the same manner may the Difference of the said two Logarithms be very fitly applied to find the Logarithms of Prime Numbers, having the Logarithms of the two next Numbers above and below them: For the Difference of the Ratio of a to 1 kg and of \(z \) to \(b \), is the Ratio of \(ab \) to \(\frac{1}{4} zz \), and the half of that Ratio is that of wab to 12, or of the Geometrical Mean to the Arithmetical.

Num.

Arithmetical. And consequently the Logarithm thereof will be the Half Difference of the Logarithms of those Rationes, viz.

 $\frac{1}{m} into \frac{xx}{2zz} + \frac{x^4}{4z^4} + \frac{x^6}{6z^6} + \frac{x^3}{8z^5} &c.$

Which is a Theorem of good dispatch to find the Logarithm of z. But the same is yet much more advantageously performed by a Rule derived from the foregoing; and beyond which, in my Opinion, nothing better can be hoped: For the Ratio of a b to zz, or zan+zab+zbb, has the Difference of its Terms zz, or zan+zbb, or the Square of zanzb=zx, which in the present Case of sinding the Logarithms of Prime Numbers, is always Unity; and calling the Sum of the Terms zz+ab=yy, the Logarithm of the Ratio of Jab to zanzb or zz will be found

 $\frac{1}{m} \ln \frac{1}{yy} + \frac{1}{3y^6} + \frac{1}{5y^{10}} + \frac{1}{7y^{14}} + \frac{1}{9y^{18}} &c.$

Which converges very much faster than any Theorem hitherto Published for this purpose.

Here note, that is all along applied to adapt these Rules to all sorts of Logarithms. If m be 10000 &c. it may be neglicited, and you will have Nepair's Logarithms, as was kinted before; but if you desire Briggs's Logarithms, which are now generally received, you must Divide your Series by

2.30258.50929.94045.68401.79914.54684.36420.76011.01488.62877.29760.33328

Or Multiply it by the Reciprocal thereof viz.
0.43429-44819.03251.82765.11289.18916.60508.22943.97005.80366.65661.14454

But to fave so operose a Multiplication (which is more than all the rest of the Work) it is expedient to Divide this Multiplicator by the Powers of z or y continually, according to the direction of the Theorem, especially where x is small and Integer, reserving the proper Quotes to be added together, when you have produced your Logarithm to as many Figures 2s you desire, of which Method I will give a Specimen.

If the Cariofity of any Gentleman, that has leifure, would prompt him to undertake to do the Logarithms of all Prime Numbers under 100000 to 25 or 30 Figures, I dare affire him that the Facility of this Method will invite him thereto; nor can any thing more easie be desired. And to encourage him, I here give the Logarithms of the first Prime Numbers, under 20% to fixty places, computed by the accurate Pen of Mr. Abraham Sharp, (from whose Industry and Capacity the World may in time expect great Performances) as they were communicated to me by our sommon Friend, Mr. Euclid Speidall.

Mr. Halley's Compendious and Facile Method Num. Logarithm.

The next Prime Number is 23, which I will take for an Example of the foregoing Doctrine; and by the first Rules, the Logarithm of the Ratio of 22 to 23 will be found to be either

$$\frac{1}{22} - \frac{1}{968} + \frac{1}{31944} - \frac{1}{937024} + \frac{1}{25768160} &c. or$$

$$\frac{1}{23} + \frac{1}{1058} + \frac{1}{36501} + \frac{1}{1119364} + \frac{1}{32181715} &c.$$

As likewise that of the Ratio of 23 to 24, by a like Process.

$$\frac{1}{23} \frac{1}{1058} + \frac{1}{36501} \frac{1}{1119364} + \frac{1}{32181715} &c. or$$

$$\frac{1}{24} + \frac{1}{1152} + \frac{1}{41472} + \frac{1}{1327104} + \frac{1}{39813120} &c.$$

And this is the Refult of the Doctrine of Mercator, as improved by the Learned Dr. Wallis. But by the second Theorem, with $\frac{2x}{x} + \frac{2x^3}{3z^3} + \frac{2x^5}{5z^5}$ &c. The same Logarithms are obtained by sewer steps: To wit,

$$\frac{2}{45} + \frac{2}{273375} + \frac{2}{922640625} + \frac{2}{2615686171875} &c. and$$

$$\frac{2}{47} + \frac{2}{311469} + \frac{2}{1146725035} + \frac{2}{3546361843241} &c.$$

Which was invented and demonstrated in the Hyperbolick Spaces, Analogous to the Logarithms, by the Excellent Mr. James Gregory, in his Exercitationes Geometrica, and since further profecuted by the aforesaid Mr. Speidall, in a late Treatise in English by him published on this Subject. But the Demonstration, as I conceive, was never till now perfected, without the Consideration of the Hyperbola, which, in a matter purely Arithmetical, as this is, cannot so properly be applied. But what follows, I think, I may more justly claim as my own, viz. That the Logarithm of the Raiso of the Geometrical Mean to the Arithmetical, between 22 and 24, or of 4/528 to 23, will be found to be either

$$\frac{1}{1058} + \frac{1}{1119364} + \frac{1}{888215334} + \frac{1}{626487882248} &c. or$$

$$\frac{1}{1057} + \frac{1}{3542796579} + \frac{1}{659676558485285} &c.$$

All these Series being to be multiplied into 0.4342944819 &c. if you design to make the Logarithm of Briggs. But with great Advantage, in respect of the Work, the said 4342944819 &c. is divided by 1057, and the Quotient thereof again divided by three times the Square of 1057, and that Quotient again by f of that Square, and that Quotient by f thereof, and so forth, till you have as many Figures of your Logarithm as you desire. As for Example, The Logarithm of the Geometrical Mean between 22 and 24, is found by the Logarithms of 2, 3 and 11 to be

| Summa | 1.36172783601759287886777711225117 |

Which is the Logarithm of 23 to thirty two places, and obtained by five Divisions, with very small Divisors; all which is much less Work, than simply multiplying the Series into the said.

Multiplicator 43429 &c.

Before I pass on to the Converse of this Problem, or to thew how to find the Number appertaining to a Logarithm. assigned, it will be requisite to advertise the Reader, that there is a small Mistake in the aforesaid Mr. James Gregory's Vera Quadratura Circuli & Hyperbola, published at Padua, Anno 1667, wherein he applies his Quadrature of the Hyperbola to the making the Logarithms: In page 48, he gives the Computation of the Lord Nepair's Logarithm of 10, to five and twenty places, and finds it 2302585092994045624017870, instead of 2302585092994045684017991; erring in the Eighteenth Figure, as I was affured upon my own Examination of the Number I here give you, and by Comparison thereof with the same wrought by another hand, agreeing therewith to 57 of the 60 places, Being desirous to be satisfied how this Difference arose, I took the no small trouble of Examining Mr. Gregory's Work; and at length found, that in the inscribed Polygon of 512 Sides, in the Eighteenth Figure was a o instead of 9, which being rectified, and the subsequent Work corrected therefrom, the Result did' agree to a Unite with our Number. And this I propose, not to Cavil at an easie Mistake in managing of so vast Numbers, especially by a Hand that has so well deserved of the Mathematical Sciences; but to shew the exact Coincidence of two so very differing Methods to make Logarithms, which might otherwise have been questioned.

From the Logarithm given, to find what Ratio it expresses, is a Problem that has not been so much considered as the former. but which is folved with the like case, and demonstrated by a like Process, from the same general Theorem of Mr. Newton: For as the Logarithm of the Ratio of 1 to 1+q was proved to be 1+q|m-1, and that of the Ratio of 1 to 1-q, to be 1-1-q|m: 66 the Logarithm, which we will from henceforth call L, being given, 1+L will be equal to 1+q1 in the one case; and 1-L will be equal to $1-q^m$ in the other: Consequently $1+L^m$ will be equal to 1+q, and $1-L|^m$ to 1-q; that is, according to Mr. Newton's faid Rule, $1+mL+\frac{1}{2}m^2L^2+\frac{1}{6}m^3L^3+\frac{1}{24}m^4L^4+\frac{1}{126}m^4+\frac{1}{126}m^4L^4+\frac{1}{126}m^4+\frac{1}{126}m^4+\frac{1}{126}m^4+$ m^{1} L' &c. will be = 1-q, and 1-m L+ $\frac{1}{2}$ m² L'- $\frac{1}{6}$ m³ L³+ $\frac{1}{16}$ m⁴ L⁴—d_m m' L' &c. will be equal to 1—q, m being any infinite Index whatsoever, which is a full and general Proposition from the Logarithm given to find the Number, be the Species of Logarithm what it will. But if Nepair's Logarithm be given, the Multiplication by m is fav'd (which Multiplication is indeed no other than the reducing the other Species to his) and the Series will be more simple, viz. 1+L+1L1+1L3+12L4+1120L3 &c. or 1-L +LL-L' L' +L L' &c. This Series, especially in great Numbers, converges so slowly, that it were to be wished it could be Contracted.

If one Term of the Ratio, whereof L is the Logarithm, be given, the other Term will be had easily by the same Rule: For if L were Nepair's Logarithm of the Ratio of a the lesser, to b the greater term, b would be the Product of a into 1+L+1LL+1LLL&c. =a+aL+1aLL+1aL'&c. But if b were given, a would be =b-b L- $\frac{1}{2}b$ LL- $\frac{1}{6}b$ L' &c. Whence, by the help of the Chiliads, the Number appertaining to any Logarithm will be exactly had to the utmost extent of the Tables. If you seek the nearest next Logarithm, whether greater or lesser, and call its Number a if lesser, or b if greater than the given L, and the Difference thereof from the said nearest Logarithm you call 1; it will follow, that the Number answering to the Logarithm L will be either a into $1+l+\frac{1}{2}ll+\frac{1}{2}lll+\frac{1}{24}l^4+\frac{1}{120}l^5$ &c, or else b into $1-l+\frac{1}{2}ll-\frac{1}{6}lll+\frac{1}{24}l^4-\frac{1}{120}l^3$ &c. wherein as l is less, the Series will converge the swifter. And if the first 20000 Logarithms be given to fourteen places, there is rarely occasion for the three first steps of this Series to find the Number to as many places. But as for Vlacy's great Canon of 100000 Logarithms, which is made but to ten places, there is scarce ever need for more than the first step a+al, or a-mal in one case, or else b-bl, or b-mbl in the other, to have the Number true to as many Figures as those Logarithms consist of.

If future Industry shall ever produce Logarithmick Tables to many more places, than how we have them, the aforesaid Theorems will be of more Use to deduce the correspondent Natural Numhers to all the places thereof. In order to make the first Chiliad serve all Uses, I was desirous to contract this Series, wherein all the Powers of I are present, into one, wherein each alternate Power might be wanting; but found it neither so Simple or Uniform as the other. Yet the first step thereof is, I conceive, most Commodious for Practice, and withal exact enough for Numbers not exceeding Fourteen Places, such as are Mr. Briggs's large Table of Logarithms; and therefore I recommend it to common Use.

It is thus: $a + \frac{al}{1-l}$ or $b + \frac{bl}{1+l}$ will be the Number answering to the Logarithm given, differing from the truth but by one half of the third Step of the former Series. But that which renders it yet more Eligible, is, that with equal facility it serves for Brigg's, or any other fort of Logarithms, with the only variation of writing

instead of 1, that is, $a + \frac{al}{m-\frac{1}{2}l}$ and $b - \frac{bl}{m+\frac{1}{2}l}$ or $\frac{ma + \frac{1}{2}la}{m-\frac{1}{2}l}$

and $\frac{1}{m}b - \frac{1}{2}lb$, which are easily resolved into Analogies; viz. As 43429 &c. -11 to 43429 +11: So is a 7 to the Num-

Or, As 43429 &c. + 11 to 43429-11; So is b 5 ber fought. If more steps of this Series be desired, it will be found as follows, $a + \frac{al}{1-\frac{1}{2}l} + \frac{\frac{1}{1+al}}{1-2l} &c.$ as may easily be demonstrated, by

working out the Divisions in each step, and collecting the Quotes; whole Sum will be found to agree with our former Series...

Thus, I hope, I have cleared up the Doctrine of Logarithms. and shewn their Construction and Use independent from the Hyperbola, whose Affections have hitherto been made use of for this purpose, tho' this be a matter purely Arithmetical, nor properly demonstrable from the Principles of Geometry. Nor have I been

obliged to have recourse to the Method of Indivisibles, or the Arithmetick of Infinites; the whole being no other than an easie Corolary to Mr. Newton's General Theorem for forming Roots and Powers.

Of making Natural Logarithms.

or rather 10, by the Reciprocal of which Briggs's (that are the

most useful Logarithms) are compos'd.

The Logarithm of 1, is always o. That of 2, the next Prime, then is first requir'd; but to attempt to raise that directly and immediately, would be so very laborious and tedious a Task (much more the greater Primes) that 'tis more expedient to use such Fractionate Numbers as lie between 1 and 2, by the Multiplication whereof 2, 3 and 5 may be produc'd; of which, in the design'd Method, those are most convenient, whose Numerators exceed the Denominators only by an Unite, since hereby Multiplication is wholly avoided.

The Rule for making the Natural Logarithms of fuch impro-

per Fractions, may be this:

sie. The To the Double of the Denominator, add an Unite; this shall Som of the Devisor: The Excess of the Numerator above the Denominator, in this Case always 1,000 &c. is the Dividend: The tor and Powers of this simple Fraction, composed of this Divisor and Devision. Dividend, must be raised by a continual Division, till the Series run out at such a Number of Figures as are required; but (because none but the Odd Powers are of Use) after the first Division, let that Quotient, and all the rest successively, be divided by the Square of the first Divisor. The Powers being thus raised, divide each respectively by its proper Index, i.e. the 1st by 1,3 the 2d by 3, the 3d by 5, &c. The Sum of all these Quotients will be the Natural Logarithm of the Fraction proposed.

Because the Logarithms of three Prime Numbers, 2, 3 and 5, are sought, which are mutually subservient to the composing each other, no fewer than Three Series can suffice: Therefore Three improper Fractions must be chosen, in each of which two at least of these Prime Numbers are ingredient; of which, such as come nearest 2, as \frac{1}{2}, \frac{1}{2}, \text{require the greatest labour in raising their several Series; but from those, once compleated, the Logarithms of the desired Primes are most easily deduced: For those Fractions, that approach nearer 1,000 &c. (i. e. whose Denominators are greater) the Series are rais'd with less labour, tho' the deducing the Logarithms of the Primes therefrom be a little more intricate, and infer many more Additions of Logarithms; but that being a Trouble scarce at all considerable, comparatively with that of making the Series, these must be supposed more eligible.

I. The Series for making the Logarithm of \(\frac{1}{2}\); twice \(2+\frac{1}{2}\)5 the first Devisor, the Square of \(5=25\) the Divisor for the rest.

```

If greater Exactness be desir'd, more Series must be admitted: No fewer than Four will be sufficient, if the least Numbers be $(1^{fr})^{\frac{25}{24}}$, then the (2^d) may be $\frac{26}{25}$, the $(3^d)^{\frac{40}{39}}$, $(4^{th})^{\frac{81}{80}}$; then the $2^d + 3^d = (5^{th})^{\frac{26}{25}} + \frac{40}{39} = \frac{16}{15}$, $(6^{th})^{\frac{81}{80}} + \frac{16}{15} + \frac{25}{24} = \frac{9}{8}$, &c. as in the foregoing Operation.

Other Four Series may be, $(1)\frac{4J}{48}$, $(2)\frac{64}{63}$, $(3)\frac{126}{125}$, $(4)\frac{225}{224}$, $(5)\frac{126}{125} + \frac{225}{224} = \frac{81}{80}$, $(6)\frac{49}{48} + \frac{64}{63} + \frac{225}{224} = \frac{25}{24}$, $(7)\frac{64}{63} + \frac{126}{125} + \frac{25}{24} = \frac{16}{15}$, $(8)\frac{81}{80} + \frac{16}{15} + \frac{25}{24} = \frac{9}{8}$ &c. as above.

Five Series will be required, if the least Numbers be (1st) $\frac{64}{63}$, $(2^d)\frac{81}{80}$, $(3^d)\frac{100}{99}$, $(4^{th})\frac{121}{120}$, $(5^{th})^{126}_{125}$; then $(6^{th})\frac{81}{80} + \frac{100}{99} + \frac{100}{99} + \frac{121}{120} = \frac{25}{24} \cdot (7^{th})\frac{64}{63} + \frac{126}{125} + \frac{25}{24} = \frac{16}{15}$. Then, as before, $(8^{th})\frac{81}{80} + \frac{16}{15} + \frac{25}{24} = \frac{9}{8}$.

Six Series will be necessary, when the least Numbers are: (1) $\frac{100}{99}$, (2) $\frac{121}{120}$, (3) $\frac{126}{125}$, (4) $\frac{225}{224}$, (5) $\frac{125}{124}$, (6) $\frac{961}{950}$, (7) $\frac{126}{125} + \frac{225}{224}$, (8) $\frac{81}{80} + \frac{100}{99} + \frac{100}{99} + \frac{121}{120} = \frac{25}{24}$, (9) $\frac{125}{124} + \frac{125}{124} + \frac{961}{960} = \frac{3125}{3072}$, (10) $\frac{25}{24} + \frac{25}{24} = \frac{3125}{3072} = \frac{16}{15}$, &c. as before.

26 An Easte and Compendious Method of making Logarishms,

As the Divisors are augmented, so likewise must the Mambai of Series.

Note, That all the foregoing Operations, represented by Fra-

ctions, are suppos'd to be perform'd by Logarithms.

But this Work having been already accomplished by the Industry of Mr. Abr. Sharp, need not be further insisted on; he has communicated the Hyperbolick Logarithm of 10, which is the double of this, by him computed and confirmed by a tripple Proof to 82 Figures; and its Reciprocal, being

The Reciprocal of the Natural Log. viz. 0.86848,89638,06503,65530,225784 Multiply'd by the Natural Log. of & viz. .11157.17756.57104.87788.314755 .0868 < 88963.80650.36553.022578 0868.58895.38065.03655.302258 086.84889.63806.50365.530226 43.42944.81903.25182.765113 6.08012.27466.45525.387116 .68684.88963.80640.365530 6080.12274.66455.255871 608.01227.46645.525587 43.42944.81903.251828 4.21153.37828.390219 .43429.44819.032418 6080.12274.664552 086,85889.63805 3 47435 585523 .69487.117104 6080.122747 608.011275 69.487117 6.948712 .260577 3474 **608**

being half of this here used, to 64 Figures; vic. The Natural Log. of 10 \pm 1.15129.25464.97022.84200.89957.27342.18210-\$8009.50744.31438.64880.16663.95048.37863.04838.67624 01, and its Reciprocal = 0.868 8.898 38.06 303, &c. whereby Mr. Briggs's Logarithms, (which are most convenient for use, the Log. of 10 being assign'd =1.00000 &c.) are not only reduc'd from the Natural by Multiplication, but immediately rais'd with the greatest Ease and Expedition. For Instance, The Natural Log. of 4 (in page 24.) is reduc'd to Mr. Briggs's, in the foregoing Page 3 and for the more Ease, in the like Cases, the Reciprocal of the Natural Logarithm of 10 is multiply'd by 2, 3, 4, 5, 6, 7, 8, 9, in the Margin.

To confirm the former way, Briggs's Logarithm of 4 is immediately raised, in which the Reciprocal of the Natural Log. of 19 is made the first Dividend, all the rest must be as directed for

making of Natural Logarithms, page 22.

The Series for Briggi's Log. of & twice 4+1=9 the first Divisor, the Square of 9=81 the Divisor for all the rest; as in the Natural Log. of 1, p. 24.

0.86858.89638.06503.65530.225784 | The Old Persons divided by 1,3,5,600 (.02650.98848.67389.29503.358420 81) 968c.(119.14800,50091.22586.461215 81) 119184 (1.47096.30371.49661.461249 81) 14709 &c (1816.00374.95674.834089 81) 18160 & (22.41979.93773.763384 81) 224197 &c.(.27678.76466.342758 81) 276787 &c.(341.71314.399293 81) 3417131 &c.(4.31868.079004 5208,247889 81) 421868079004(81) 5208247889(64.299357 81) 64299357(.793819 81)7938190 121 81) 9800(

The Sum is Briggi's Log. of \$ = 0.09691.00130,08050,41435.8783315 Co-Ar, is Briggi's Log. of 8 = 0.00308.39869.01943 58564 121669

What is writ, is sufficient to shew, how the Prime Logarithms may be made; and it's needless to say more, the abovesaid Mr. Abr. Sharp having, with inexpressible Care and Pains, composed the following Table of Logarithms (most of 'em to 61 places) for all Numbers under 100, and all Primes under 200. I durit not importune him to complete the Figures wanting at the end of foine of them; But the ease of this method may perhaps tempt some curious Reader to supply them, who will then be a Judge how much he is indebted to the Labours of this admirably Industrious Author.

Mr. Briggs's Logarithms for all Numbers, from 1 to 100, Calculated by that Ingenious Gentleman, and Indefatigable Mathematician

30 An Easie and Compendious Method of making Logarithms,

The next Work is to shew, how Mr. Brigg's Logarithms above 200 are immediately compos'd, for which several Rules may be laid down: That which is most general and easie, and comes nearest the former, for the Natural Logarithms, is this:

I. Let the Number, whose Logarithm is sought, and either of the other two Numbers next it, greater or less by an Unite (the Logarithms of one or both of which are given) he made an improper Fraction; to the Denominator doubled, add 1.0, that shall be the first Divisor, and the Square of that must divide the first Quotient, and all the rest: The Dividend must always be the Reciprocal of the Natural Logarithm of 10=86858.89638.66503.65530.22578.37833. &c. All the rest must be as is directed for making Natural Logarithms; only the Sam of the Series, or Logarithm of the Fraction, when the given Number is less than that sought, must be added to its Logarithm; when greater, subtracted from it. Ex. Gr.

The Series to make Briggs's Log. of 251, take 250, the next lefs, to make the Fraction 1/2, whose Logarithm is first sought 2×250-1 1=501 is the first Divisor, the Square thereof =251001 divides all the rest, as in the following Operation.

\$01) .86858.89638.06503 65530.225784 | The Old Powers divided by 1,3,5,&c. (.00173.37105.06599.80769.521409
251001) 1733 &c. (69,07185.65593.646478 3) 23.02395.21834.5488 d
251001) 6907185 &cc. (27.51855.831266 5) 5.50371.166253
251001) 2751855831266 (10.963525 7) 1.566218
251001) 10963525 44 9) 5

1110 = 00173.37105.06599.80769.5218218
250 = 2.39994.00086.72037.60957.252221
251 = 2.39957.37214.8103.8.13934.054932

II. The second method may be this: If two Numbers, next that whose Log. is sought (either one greater, and the other less; or both greater, or both less) have known Logarithms, the Square of the middle Number shall be the Numerator of the improper Fraction; the Product of the other two, on each side, the Denominator.

For Example, Take 239, its Square 57121, and the Product of 238 and 240=57120; whence the Fraction 17711, and their Sam 114241, the first Divisor, and its Square 13051000081 Divisor for all the rest, as in the following Series.

14241) 86858.89638 06503.65530.225784 | The Odd Powers divided by 1, 2, (.00000,76031,28157,19841,086215 | .00000,76031 28157,19841,086215 | 13051006081) 7603128 &c.(.58257.027159 | 3) 19419.009058 | The Sum is Briggs's Log. of \(\frac{1711}{1712} \Rightarrow 0.00000.76031.28157.39260.095268

If the Log. of the middle Number be fought, the Log. of the Fraction, added to the Log. of the greatest and least, will be the Log. of the Square of the middle Number; the half of which it its Logarishm, as in the following Work.

```
24 x 10 = 240 (1) = 240 = 2,38021.12417.11606102293.624499 

34 x 7 = 238 (2) = 238 = 2.37697.69570.56511.95446.6125.05 

240 x 238 = 57120 (3) = 57120 = 4.75678.81987.68117.97740.236964 

(4) = \frac{17111}{17111} = 0.00000.76031.28157.39260.095268 

239 x 239 = 57121 (5) = 57121 = 4.75679.58018496275.37000.382232 

2 the Log. of 57121 = Log. of 239 = 2.37839.79009.48137.68500.166116
```

If the Log. of the greatest or least Number be sought, subtract the Log. of the Fraction from the Log. of the Square of the middle Number, the Remainder shall be the Log. of the Product of the other two; from which subtract the Log. of the known Number, the Remainder will be the Log. of the other.

Suppose the Log. of 239, 240 given, and 238 sought, then (5)-(4)=(3)-(1)=2; if the Log. of 239, 238 given, and 240

fought, then (5)—(4)=(3)4(2)=(1).

III. The Third Method may be: Find such a Product of the Number, (whose Logarithm is sought) whose Factors have known Logarithms, which shall be greater or less by an Unite than another Number composed of such as have known Logarithms, these two shall make the Fraction whose Logarithms is to be directly sought, according to the prescriptions in the former, and the Logarithm desir'd deduc'd thence, as in the first method. For Instance, Take 227, which drawn into 27 and 31, produces 189999, the Fraction is 189999, the square of that 144399240001 divides all the rest.

```

32 An Easte and Compendious Method of making Logarithms,

This last Method may ordinarily be render'd as Universal as the first, and more Exact and Expeditious then the second; all the difficulty being in finding out proper Numbers. The method I commonly us'd, which rarely fails, is here subjoyed; better understood by the Performance, than express'd.

Logarithms of 229 30000 and 2260001 =71x139x229 and 2260000 =2x113x10000

Another Expedient for finding Numbers, accommodate to the Third Rule or Method of making Briggs's Logarithms.

Find such a Product of the Number, whose Logarithm is sought (the greater the better) which hath two Numbers nearest it, on both or either side, composed of such whose Logarithms are known; Square the Middle, that shall be the Numerator; the Product of the two on either side, is the Denominator of the Fraction; the Logarithm whereof is to be made according to the Rules there laid down, only observing in which the sought Number is ingredient; if in the Numerator, the Logarithm of the Fraction must be added to the Logarithm of the Denominator; but if in the Denominator, it must be subtracted from the Logarithm of the Numerator, &c.

Convenient Fractions found for Raising the Logarithms of 211, 223, 227, 229, 235, 239, 241, 251, and 257.

```

Another different Method of making Logarithms, communicated by Mr. Abr. Sharp, deriv'd from Dr. Wallis's Illustration of Mercators Quadratuse of the Hyperbola, in Philos. Transactions, N° 38. wherein the greatest part of the Work, (viz. Raising all the Powers) is perform'd by Multiplication, being easier and of quicker dispatch than Division.

ET any three Numbers in Arithmetical Progression be propos'd, the least =A, the middle =B, the greatest =E. If the Logarithm of any one of these be given, the Logarithms of the other two may be thus obtain'd, by an infinite Series,

I. Let the first Term of the Series be $C = \frac{B-A}{B} = \frac{E-B}{B} = \frac{E-A}{E-A}$

II. The Series $=\frac{C+C^2}{1-2}+\frac{C^3+C^4}{3}+\frac{C^5+C^6}{4}+\frac{C^5+C^6}{5}+\frac{C^7+C^8}{7-8}+\frac{C^9+C^{10}}{9-10}+\frac{C^8}{10}$

HI. The Sum of all the Odd Powers (each being divided by its proper Index) viz. $\frac{C}{1} + \frac{C^3}{3} + \frac{C^3}{5} + \frac{C^7}{7} + &c. = Z$ is the Hyperbolick Logarithm of $\sqrt{\frac{E}{A}}$.

IV. The Sum of the Even Powers, (each divided by its Index) viz. $\frac{C^2}{2} + \frac{C^4}{4} + \frac{C^6}{6} + \frac{C^3}{8} + \frac{C^{10}}{10} + &c. = X$ is the Hyperbolick Logarithm of $\sqrt{\frac{BB}{EA}}$.

V. The Sum of all the Powers, or Z+X is the Hyperbolick . Logarithm of $\frac{B}{A}$

VI. The Difference of the Odd and Even Powers, or Z-X is the Hyperbolick Logarithm of $\frac{E}{R}$.

If B be $= 1, 10, 100, 1000, 10000, \sigma c$. all the Powers will be rais'd by the Multiplication of C continually for the Hyperbolick Logarithms; or of C into the Number 0.43429448 &c. and into the several Products for Briggs's Logarithms; all which Powers

must be divided by their respective Indices.

This Method hath this peculiar Advantage above others, That a Series once rais'd for the lowest Numbers in that Progression, will generally serve for finding the Logarithms of Eight or more Prime Numbers, without any more labour than Addition or Subtraction; therefore is undoubtedly the most Expeditious for Compoling a Table, especially for making the Logarithms of the first

Primes, tho' possibly not for raising a single Logarithm. The Logarithms of the first Primes, viz. 2, 3, 5, &c. must unavoidably be the Hyperbolick or Natural, fince in all Methods of raising Logarithms, these offer themselves first; and from hence must be deduc'd the Number .43429448 &c. which reduces them . to Briggs's: Amongst variety of Expedients for effecting this, here fix upon one that is easie, and capable of a competent Exactness, by Three Series, since fewer will not perform it to a tolerable Accuracy, without great tediousness and difficulty.

The First Three Numbers are 96=A, 100=B, 104=E; then $\frac{B-A}{B} = \frac{100-96}{100} = \frac{4}{100}$, or $\frac{E-B}{B} = \frac{100-104}{100} = \frac{4}{100}$, or $\frac{E-A}{E+A} = \frac{100-104}{100} = \frac{4}{100}$ $\frac{104-96}{200} = \frac{8}{200} = \frac{4}{100} = C$: So that 0.04 = C is the First Term,

whose Powers, &c. make the First Series.

The Second are 92=A, 100=B, 108=E, and $\frac{B-A}{R} = \frac{8}{100}$ 508 = C.

The Third are 975=A, 1000=B, 1025=E, and $\frac{B-A}{R} = \frac{25}{1000}$,025=C, the First Term of the Third Series.

A short and easie Method of Raising the Logarithms of the first Prime Numbers with great exactness.

Z-X=1031 = 0246926125903715010143076

By these Three Series, the Logarithms of all the Primes under 29, except 11, may be made, and several above: For the Logarithm of 7 is got from (II⁴) 1008 = 12 x 12x7; of 13 from (1") 104=8x 13, or from (III^d) 975= 75×13; of 17 from (161) 9996=6x7x14x17; of 19 from (IIId) 9975=3×7×25× 19; of 23 from (IId) 92= 4x23; of 31 from (IId) 992= 32×31; of 41 from (IUd) 1025=25×41, &c. The Log. of 11 is had from a Series of oi, for 99=9×11, or from ,001 for 1001=7×13×11; the Log. of 29 is got from a Series of ,0005 for 10005= 3×5×23×29; and 37 is had from ,001 for 999=27 x 37, &c.

Expedients of this kind I have us'd, both for finding and proving the Logarithms of all Primes under 1100, and many above.

コー 49670 古Cコー 27 Shall here offer One of the Three Expedients, whereby these first Primes, together with many others, were computed to the Exactness of 82 places; which was by Six Series, (whereof, 008 was the lowest) whence the Logarithms of these Ten Fractions were made; the following Operations being supposed to be persormed by Logarithms.

(1)
$$\frac{1008 \pm 7 \text{kg} \times 16}{1000}$$
 (2) $\frac{1000}{992 \pm 32 \text{kg} \cdot 1}$ (3) $\frac{1000000}{1000000}$ (4) $\frac{100000}{999998 \pm 62 \times 127 \times 127}$ (5) $\frac{10000}{9996 \pm 14 \times 42 \times 17}$ (6) $\frac{100000}{100000}$ (7) $\frac{10000}{9975 \pm 15 \times 35 \times 19}$ (8) $\frac{100000}{99875 \pm 125 \times 17 \times 47}$ (9) $\frac{100000}{99975 \pm 75 \times 31 \times 43}$ (10) $\frac{100000}{1000000} + \frac{100000}{1000000} + \frac{10000}{10000} + \frac{1000}{1000} + \frac{1000}{1000} + \frac{1000}{1000} + \frac{3969}{3968 \pm 128 \times 31}$ (12) $\frac{100125}{100000} + \frac{1000125}{100000} + \frac{100000}{99996} + \frac{432 \pm 16 \times 27}{425 \pm 25 \times 31}$ (13) $\frac{2969}{3875} + \frac{3969}{3968} + \frac{128}{225}$ (14) $\frac{1008}{1000} + \frac{1000}{1000} + \frac{432}{9996} + \frac{256}{380} + \frac{81}{100000} + \frac{100000}{99875} + \frac{100000}{99875} + \frac{100000}{255 \times 15 \times 17}$ (16) $\frac{432}{425} + \frac{256}{255} + \frac{81}{80}$ (17) $\frac{100000}{99979} + \frac{1000000}{1000000} + \frac{256}{255} + \frac{125}{125} \times 17$ (18) $\frac{1000}{992} + \frac{3876}{3875} + \frac{125}{125} \times 125 \times 17$ (19) $\frac{15625}{125} + \frac{256}{255} + \frac{78125}{77824} + \frac{10000}{200} + \frac{15625}{125} + \frac{128}{25} + \frac{15625}{65536} + \frac{21}{20}$ (20) $\frac{78125}{77824} + \frac{1000}{24} + \frac{128}{25} + \frac{128}{25} + \frac{15625}{65536} + \frac{21}{20}$ (21) $\frac{128}{125} + \frac{128}{125} + \frac{15625}{65536} + \frac{21}{20}$ (22) $\frac{21}{20} + \frac{1008}{1000} + \frac{25}{24}$ (23) $\frac{128}{125} + \frac{25}{24} + \frac{16}{15}$ (24) $\frac{81}{15} + \frac{16}{15} + \frac{25}{24} + \frac{9}{8}$ &c. 28 in the former Operations.

It remains to Exemplify in the making Briggs's Logarithms immediately by this method: Take the Three Numbers in the IId Series, viz. 92=A, $100 \Rightarrow B$, $108 \Rightarrow E$, and $\frac{B-A}{B} \Rightarrow \frac{8}{100} \Rightarrow 08 \Rightarrow C$, by which multiplying the Reciprocal of the Hyperbolick Logarithm of 10 viz, 43429448,&c.=N continually, and dividing the respective Powers by their proper Indices, the following Series are made.

C1N+43429 &c. 034743558552260146212 C134743&C-C11N-2779484684180811697 Cx27794&c.-C1xN=222358774734464936 Gx222358&c-C4xN=17788701978757195 Cx17783780C'xN=1423096158300575 CX14233980=C°XN=113847692664046 C x 1138478c=C'xN=9107815413124 C x 910781 &c=C'x N= 728625233050 C x 728625 &c=C'x N= 58290018644 C x 582900 &c=C1 *xN= 4663201492 Cx4663201492=C'1XN= 373056119 C x 373056119=C'1x N= 29844489 Cx 29844489= C14 x N = 2387559 Cx 2387559 = C" IN = 191005 Cx 191005 = C' xN = 15280 Cx 15280 = C" xN = 1222 $Cx_{1222} = C^{17}xN$ 98 C XN = 034743558552260146212 $\frac{1}{7}C^{3} \times N = 74119591578154978$ $\frac{1}{7}C^{5} \times N = 284619231660115$ JC' x N = 1301116487589 #C' x N = 6476668738 +C" ▼N = 33914193 TC''IN = 183658 HC" IN = 1018 +C'7 x N = 6 1 = 034817964070697216507 #C³xN₂43429&c₂ 1389742342090405848 #C⁴x N = 4447175494689299 $\frac{1}{2}$ C° x N = 18974615444008 #C* x N = 91078154131 -C' ×N = 466320149 "C" IN = 2487040 12C14 x N = 13643 76C' XN = 76 $X = \sqrt{\frac{15518}{15518}} = 0.01394208583747514194$ B=1+1= .036212172654444730701 Z+X = X C=.008 x N=003474355855226014621 ${}_{i}^{C^{i}} \times N = 74119591578155$ ${}_{i}^{C^{i}} \times N = 2846192317$ 4C' x N = 130112 4C'IN= 6 $\frac{1}{3} = \frac{1}{2} = \frac{1}$ C'XN = 000013897423420904058 $\frac{1}{2}C^4 \times N = 444717549469$ LC' XN = 18974615 +C x N. = 911 X. V-199964 - 00013827868157429053 Z-X=; ** = 003460532109506486158 Z+X : 1313 = 003488327845821344264 0g"-992==2.996511672154178655736 Log. 92 = 1.963787827345555269299 1

Hence 'tis evident, that after the first Series for 108 and 92 is Compos'd, with how much ease all the others are thence deriv'd, even with little more labour than transcribing: Have instanc'd in the next higher, i. e. making C=.008, hence the Logm of 1008=144 × 7, and of 992=32×31, are ob-Putting C= .0008 tain'd. the Logarithms of 10008 = 72×139 , and of $9992 = 8 \times$ 1249, are got; if C be put =.00008, the Logarithms of $100008 = 216 \times 463$, and of 99992=8 x 29 x 431, are made; and if C be .000008. the Logarithms of 1000008 $=72 \times 17 \times 19 \times 43$, and of $999992 = 8 \times 49 \times 2551$, are found: So that the Logarithms of Ten Primes are obtained from this One Series, viz. 3, 23, 7, 31, 139, 1249, 463, 431, 43, and Many other Series 2551. are as prolifick as this; none I have met with, whence fewer than Six, or Four at least, useful Logarithms may not be deduced. So that, though the labour in raising the first Series may be Considerable, yet the advantage of gaining so many Logarithms thence, with fo great ease, makes abundant Compensation.

Shall .

The way to find convenient Numbers by which Logarithms may be made without any other Division than by the Indices of the Powers. If the Fraction be intended to begin with an Unit and Cyphers following, take such a Product of the Number proposed as begins with an Unit (and Cyphers if it may be) subtract such Products from that successively as begin with the same Figure, or the next less than that which immediately follows the Unit or Cyphers, subtracting this Factor always from the former, multiply'd by 10, 100, &c. till a convenient Number be found. If it be design'd to consist as much as may be of nines, choose such a Factus of the proposed Number as begins with, or is the nearest so nine, but less, add such Products to that successively, as will make the following Figures as near as possible nines, &c. Ex. gr.

Tho' this Method feem to be more confined, not admitting of fo great variety as the other, yet at the beginning of the Table where the other is deficient, 'tis most Commodious and Expeditions, and performs well to 1000 or upwards, and affords excellent Expedients for many great Primes; but where it fails, there the other becomes more convenient, and performs with greater Ease, Expedition and Exactness than before: So that both together render this Art, Viz. Logarithmetechnic most compleat.

If it were required to extract the volumer in the same manner, divide the Logarithm of 1.05=02118929906994 by 365, the Quotient is .00005805287416,the Natural Number answering it by Briggs's Tables, is found to be=1.0001336805171, which divided by 10 Quotiens (0.5263861476)232, six of the first Figures hereof being devilible by Primes under 200 may be subservient for finding this of Root to 50 Places or more, if required, for 526386 = 6x 7x 83 x 151. this will be somewhat easier and of quokker Dispatch than 50 Elements for 1.06. Such Expedients may probably be sound for any Number that can be proposed.

Definitions.

Figure 1.

Chord or Subtense is a Right-Line connecting the Extremities of an Arc, as FO is the Chord of the Arcs FEO and FDO A Sine (=s) is half the Chord,

or a Right-Line drawn from one end of an Arc falling perpendicularly on the Diameter that terminates in the other end, F R is the Sine of the Arcs F E, F D. The Radius (=r) is the Semidiameter, or Sine of $90^d = 1.000$. &c. the greatest of all Sines. The Co-sine (= c s) is that part of the Radius which is intercepted betwirt the Center and the Sine, or the Sine of the Complement, i. e. the difference of the Arc from a Quadrant or 90d, as C R=FW is the Co-fine of the Arc FE, or the Sine of its Complement FB, and also of its Supplement or Difference from a Semicircle FA; EB is the double of the Co-sine of the Arc D B or the Chord of its Supplement of βE , so $E\gamma$, $E\delta$, $E\epsilon$, En, are the double Co-fines of the Arcs $D\gamma$, $D\delta$, $D\epsilon$, Dn, The Versed Sine (= v) of any Arc less than 90d, is the Excess of the Radius above the Co-fine of the Arc, as ER=EC-CR is the Versed Sine of the Arc F B A Veried Sine of an Arc greater then 90d is the Sum of the Radius and the Co-sine, as DR=DC+CR is the Versed Sine of FD. The Secant of an Arc is a Right-Line drawn from the Center through one end of the Arc till it meet with the Tangent, which is a Right-Line touching the Circle at the Extremity of that Diameter which cuts the other end of the Arc, so CH is the Secant, and EH the Tangent of the Arc FE. The Co-secant or Co-tangent of an Arc are the Secant or Tangent of the Complement of that Arc to 90, so CI is the Co-secant, and B I the Co-tangent of the Arc F E.

A Method of computing the Natural Sine, Tangent or Secant of any Arch immediately, from the length of the Arch being given.

HE length of any Arch is readily obtain'd from the Proportion of the Diameter of the Circle to its Circumference exhibited by Ven Ceulen fince prolonged and confirm'd to 74 places by Abraham Sharp, which is as 1,00, &c. to 3.1415926535897932384626433832795028841971693993751058-209749445923078164052-1. This Number the Radius being 1.0000, &c. is the just length of the Semicircle or Arch of 1804

1804 oc., whence any less Arch is easily got by Division, Torse part hereof = 0002908882086657215961539484614 + is the length of the Arch of 1. Minute, which being multiply'd by the Number of Minutes contain'd in any other Arch serves readily to give its length, hence by Mr. Newton's Series published by Mr. Halley in Phi. Trans. No 219. The Sine, Co-sine, Tangent, &c. of any Arch are had. If the length of the Arch be put=A. then is the Natural

Sine = $\frac{A}{6}$ $\frac{1}{6}$ $\frac{A^{3}}{120}$ $\frac{A^{7}}{5040}$ $\frac{A^{7}}{362880}$ $\frac{A^{11}}{39916800}$ +A13 A15 A17

Stions of the two Series of the Sine and Co-

A little to facilitate the Operation in the preceding Table, the Powers of the Arch of one Minute, and their Quotients, being

being divided by the respective Co-efficients of each Member of both the Series for the Sine and Co-sine, and the Logarithms of those Quotients and Co-efficients, so that the Powers of the Number of Minutes contain'd in any Arch being multiplied respectively by those Quotients, produce the several Members of the Series, whereby the Sine and Co-sine are Composed.

These Tables need no Explication, each Table and Number as far as needful having a proper Title persix'd, only the small Figures in these two Tables, enclosed in a Parenthesis denote the Number of Cyphers that must precede the first Figure of

the following Number.

The Use of the First Table is principally to compose the Second, though thereby in the Tangent, Co-tangent, Secant, and Co-secant of 1' may be easily made from their proper Series but the Sine and Co-sine most readily from the 2d to 23 Figures: But the chief Design and Use of the Second Table is express'd above:

Shall exemplify in making the Sine and Co-fine of 44^d 37' which being so very near 45^d o' must necessarily be as Troublesom and

Leborious as any that need be propos'd.

The Number of Minutes contain'd in 44⁴ 37' are 2677, call this Number a, the Powers hereof must be raised, which (fince its consists only of Four Figures) is perform'd with much more Ease and Expedition than the Powers of the Arch can be, which

must consist of so many Places as are intended in the Sine, a due Account must be kept of the Number of Figures every Power extends to, tho' no more need be expressed in any, than are required in the Sine, fewer will suffice in most; the reason is, that after Multiplication with the respective Numbers, viz. those which answer the same Power in the Second Table, the Number of Cyphers preceding the first Figure of each Product may be rightly determined; in the adjoyning small Table of the Powers of 2677 the Number of Figures in each is express'd by small Figures before it, enclos'd in a Parenthesis.

The Powers of 2677 = a being the Number of Minutes contain'd in 44 deg. 37 min.

A confiderable part of the Labour both in raising the Powers and multiplying them by the Numbers in the Second Table in this Method, or by the Co-efficients of the Two Series in the former, may be faved, in working by the Logarithms, for which the Third and Fourth Tables may be very lerviceable, especially when the Powers ascend high, as in the prereding Example. The Characteristicks of the Logarithm in the Third and

Fourth Tables confist of Two Figures.

The Series for the Co tangent.

-17404811151832

The Tang. of 29deg. 55'=57541264016| The Co-tang. of 29deg. 55'=173788326879161 er the Ting. of 60 deg. 05'

Altho' the Series for the Tangent & Secant converge so flow-Ty, that except near the beginming of the Quadfant (where they are of excellent Use)'twere better to make the Sine and Cofine first, and from thence deduce them by these known Proportions, as the $\{Co\ fine \}$: to the { Sine Cr. fine } :: fo is the

Radius: to the { Tangent (0-tangent) }.

The Series for the Co Jecans of 29 dege 55 1795×(2i.e.)3437,7&c.=A=1 91517925949024 十二十二08702405575932 $73.A^3 = 275800741772$ 15736A' 7957245427 6155014 19407ZA i s 170146 A15

The Co-feeant of 29deg. 55 22.00505318032775 or Secant of 60deg. 05'

And as the \{ \frac{Sine}{(o-fine} \}: to the Radius : \frac{\frac{1}{2}}{2} h

fo the Radius : to the \{ \int_{Secant}^{Co-fecant} \}. Yet the Two Series for the Co-tangent and the Co-secant are of much quicker Dispatch, as in the instance of the Tangent and Co-tangent and Co-secant of 29 deg. 55'. The Powers of the Arch of 29 deg. 55' or 1795' = ,52214433455497 &c. = A may be seen before, and need not be repeated. To obtain a multiply the Number of Minutes, viz. 1795 by the reciprocal of ,0002908 &cc. =3437,74677, &cc. The Versed Sine of any Arch under 90 deg. is the difference of the Radius and the Co-sine of the said Arch; the Sum of the Radius and the Sine of any Arch is the Versed Sine of an Arch so much exceeding 90 deg, so that the Series for the Sine and Co-fine may be easily apply'd to the finding the Versed Sine of any Arch

immediately, which is so plain and obvious as needs no Illustration.

1. The Sine of an Arc FR being given to find its Figure 1. Co-sine CR CFq -- FRq = CRq, therefore \(\sqrt{CFq} -- FRq \): = CR i. e. \sqrt{rr} = cs.

2. The Sine of an Arc FR being given, to find EV the Sine of half the Arc. CR is found by 1st and consequently ER; then $\sqrt{FRq+ERq}$: = FE, but $\frac{1}{2}$ FE = EV, therefore $\frac{1}{2}$ $\sqrt{SS+VV}$:

3. To find the Sines of the double, triple, quadruple, quintuple, &c. of any Arc whose Sine is given successively. Let the Chords $D\beta$, $\beta\gamma$, $\gamma\delta$, $\delta\epsilon$, en be all equal, draw the Chords $D\gamma$, $D\delta$, $D\epsilon$, Dn, and $E\beta$, $E\gamma$, $E\delta$, $E\epsilon$, E_n extended, draw the Radius $C\beta$, and make $\chi \zeta = D\gamma$, $\delta \theta = D\delta$, ex = $D\epsilon$ and $\beta \lambda$ $=E\beta$, $\gamma\mu=E\gamma$, $\delta\pi=E\delta$, $\epsilon\ell=E\epsilon$, $n\sigma=En$, then are the Triangles $EC\beta$, $D\beta\gamma$, $D\gamma\zeta$, $D\delta\theta$, $D\epsilon\varkappa$, $E\beta\lambda$, $E\gamma\mu$, $E\delta\pi$, $E\epsilon\varsigma$, Eno, all Isosceles and Equiangular, In the Triangles Εβλ, Εγμ. which being largest, all their parts are most distinguishable, the the Angles $E\lambda\beta$, $E\mu\gamma$ are equal, the Angles $ED\beta$, $E\gamma\beta$ being subtended by the same diagonal EB do both together make two right Angles, so also do the Angles $ED\beta$, $\beta D\lambda$, therefore the Angles $E_{\gamma}\beta$, $\beta D\lambda$ are equal, but $\beta\lambda = E_{\gamma}$, and $D\beta = \beta_{\gamma}$ by Construction, therefore the Triangles $E_{\gamma}\beta$, $\beta\lambda D$ are equal, confequently $D\lambda = E\gamma$; in the same manner may be prov'd $B\mu =$ ES, $\gamma \pi = E_{\delta}$, $\delta_{\ell} = E_{n}$ likewise $\delta \zeta = D\beta$, $\epsilon \theta = D\gamma$, $n \kappa = D\delta$. Therefore $C\beta$: $E\beta$:: $D\beta$: $D\gamma$ i.e. Radius: to double the Cofine of an Arc:: so is the Chord of the Arc: to the Chord of double the Arc, and halving the two last Terms, :: 1 DB: 1 Dy so is the Sine of the Arc: to the Sine of twice the Arc, again 2) $C\beta : E\beta :: D\gamma : D\zeta :: \frac{1}{2}D\gamma : \frac{1}{2}D\zeta$ i. e. r : 1cs arc :: s 2 arc: s arc + s 3 arc, (3) CB: EB:: 1 Do: 1 Do i.e. r: 2 cs arc:: \$ 3 arc: \$ 2 arc + \$ 4 arc, 4) (\$: E\$:: 1 DE: 1 Dz. i. e:

i. n. r ; 2 es arc :: s 4 arc : s 3 arc + s 5 arc, &c. again 5) CB: $E\beta: \frac{1}{2}E\beta: \frac{1}{2}E\lambda$, i. e. r: 2 cs arc:: so is the Co-sine of the are:: to the Sum of the Radius and the Co-fine of double the arc, (6) $C\beta : E\beta : : \frac{1}{2} E\gamma : \frac{1}{2} E\mu$, i. e. r : 2 cs arc :: cs 2 arc : cs are + cs 3 arc, (7) CB: EB:: 1 ED: 1 Em, i.e.r: 2 cs arc:: cs 3 arc : cs 2 arc + cs 4 arc, 8) CB : EB : : 1 EE : 1 Ee, i. e. r: 2 cs arc :: cs 4 arc : cs 3 arc + cs 5 arc, (9) CB : EB :: \frac{1}{2} En : Eo. i. e. r: 2 cs arc:: cs g arc: cs 4 arc + cs 6 arc, &c. Ex. Gr: Suppose $D\beta = \beta_{2}$, &c. be o deg. 4 min. its Sine is = 2001454440530542 then Radius = 1, : 2 cs, i. e. o deg. 5 min. = 1,999997884601624 :: s odeg. 5 min. = .001454440530542 :s o deg. 10 min. = 2002908877984363 (2) r: 2 cs o deg. 5 min. = 1,99 &c. :: 1 0 deg. 10 min. =,002908 &c : 1 0 deg. 5 min. + s o deg. 15 min. = ,005817749815290 out of which subtract s e deg. 5 min. = 300145 &c. there rests : 15' = 3004363309284748 &c. again (°) r: 2 cs (min. = 1,999997884601624:: cs 0 deg. (6) r: 2cs o deg. 5 min. = 1,9999978 &c. : : cs 10 deg. = 999995769205486 : cs 5 min. + cs 15 min. =1,999989423021547 out of which subtract cs 5 min. = 99999894 &c. rests cs 15 min. = 999999480720734. (7) r: 2 cs 5 min. = 1,9999978 &c. : : cs 15 min. =999990480720734: cs to min. + cs 20 min. =1,9999-78846063230, out of which subtract cs 10' = 999995769205486 rests cs 20 min. = 999983076857744 &c. By this one Rule (afser the first Sine is obtained) the whole Work may (if need) be accomplished, and it has these Advantages, the two first Terms are invariable, the first being the Radius = 1, Division is wholly excluded, the second being fix'd, a fmall Table of its Products to 10 or 100, turns Multiplication into Addition: From the fourth Term the Sine or Co-fine of fuch an Arc must be subtracted, as is so much less than the Arc of the third Term, as the Arch of which the Sine or Co-fine is fought exceeds it, Viz: To much as is the distance of the first in that Rank from the beginning of the Table.

4. Having the Sines of the first or last 30° of the Quadrant given to find the middle 30°, viz. all between 30° and 60°. Make the Arch DL=30° draw the Radius CL and perpendicular thereto, the Chords MG less then 60°, and ea greater then 120°, draw MP, eb parallel to CB, and SG, ab to CD, then in the Triangles MQG, abe the Angles QMG, be a are = 30°, therefore drawing the Semicircles MQG, eb a 'tis manifest the Lines QG, ba being the Chords of 60° are equal to the Radius MK or KG, and eg or ga, in the Triangle MQG, (MGq, i.e.) 4 GKq—QQq.

=MQq, but because GK=QG, 3GKq=MQq, therefore GKx $\sqrt{3} = MQ$, and TG (i.e. PQ) $+ GK \times \sqrt{3} = MQ$, that is, if. to the Sine of an Arc less then 30d the Sine of its defect multiplied by $\sqrt{3}$ be added, the Sum will be the Sine of an Arc as much exceeding 30d. The Sine of 11d o min =,190808995376544 multiplied by $\sqrt{3}$ =1,7320508075688773 produces 33049087453-3349, which added to the Sine of 19d o min. =,325568154457155 makes ,656059028990504 the Sine of 41d o min. In the Triangle cha, (eaq, =) 4 egq - ahq=chq, but because eg = ab, 3 egq = ehq and $eg \times \sqrt{3} = eh$ (i. e. ek + kh) $g^{\circ} eg \sqrt{3} - ek = kh$ =fa=fn, that is, if the Sine of an Arc greater than 60d be multiplied by 13, and out of the Product the Sine of an Arc wanting so much of 90d be subtracted, the remainder is the Sine of an Arc fo much exceeding 30^d Ex. Gr. if the Sine of $83^d = .99254615164$ 1321 be drawn into 13=1,732 &c. and from the Product 1,7191-4036349073, the Sine of 67^{4} =,920504853452439 be taken, there

remains, 798635510047292 the Sine of 53d o min.

5. Having all the Sines under 60d to find all the rest by Addition only, or having all above 30d to find the Sines of the first 30d, or having the Sines of the first and last 30d to find all the intermediate by Subtraction only. In the Triangle MQG, MK=QG (by 4) therefore ZM + MK = SG, that is, if to the Sine of any Arc ZM less then 60d the Sine of the defect KM be added, the Sum is the Sine of an Arc so much exceeding 60d, ex. gr. Sine 41d=6560-59028990506 + Sine 19d o min. = 325568154457155, makes Sine 79d o min. = 981627183447661. In the Triangle cha, eg = ah (by 4) therefore eg-em (i. e. h p)=pathe Sine of the Arc Bn, that is, from the Sine of an Arc exceeding 60d subtract the Sine of the Excess, and there will remain the Sine of an Arc wanting so much of 601 ex gr. Sine 67d=,920504853452439-Sine7d=,1218693434- $53^{d} = 798635510047292$. By a continued Bisection 05147=S (by the second) the Sine of an Arc a little less then od 1 min. may be found, and from that by Proportion the Sine of od 1 min. But the Sine of od 1 min. may be obtained from the length of its Arc by the Series in the other Method with incomparably less labour and greater accuracy, from which (by the third) the Sines and Cofines of all Arcs under 30d being computed, the rest are had (by the () by Subtraction; or having the first 30d made (by the third) all to 60d may be got (by 4th) and all the rest by Addition (by 5th); or the last 30d being obtained (by third) the rest above 30d are made (by fourth) and the first 30d by Subtraction (by fifth.)

The Sines being made the Tangents & Secants are thus obtained. The Triangls CFR, CWF, CEH, CBI are Acquiangular, then CR: RF::CE: EH, i.e. Co-fine:: Radius: Tangent, and (FR, i.e.) CW: (RC, i.e.) WF: CB: BI, i.e. Sine: Co-fine:: Rad:: Co-tang.: CR: CF::CE: CH, i.e. Co-fine: Rad:: Rad:: Secant, and CW: CF::CB: CI, i.e. Sine: Rad:: Rad: Co-fecant.

AN

AN EASY

Quadrature of the CIRCLE,

From 2 \(\) 3 or \(\) 12, Communicated by Mr. HALLEY.

Professor of Geometry in the University of Oxford.

Any have been the Attempts in all Ages to exhibit a square Equal to the Area of a Circle, or which is all one, to find the ratio of the Diameter to the Circumference: This Archimedes near 2000 Years since shewed to be nearly a 7 to 22; and consequently the Area to the circumscrib'd Square as 11 to 14. contenting himself in small and integer Numbers: though his Method were capable of extreme Exactness, as has been since made appear by the most elaborate Calculus of Ludosf Van Ceulen. This Gentleman by the continual Bisection of an Arch performed by Extraction of the Square Root (Analogous to Mr. Briggs's Method for making the first Logarithm) carried his Work so far as to assure us, that the Diameter being 1, the Circumference was 3.1415.9265.3589.7932.3846.2643.3832.7950.288 +, the last Figure being not an Unite less than the Truth. And this was look'd upon as so valuable a Performance, that it stands Engraven on his Tomb-Stone to perpetuate the Memory thereof. However it might be questioned, whether it were really so, unless by him that had taken the pains to examine it throughout. And most lovers of these Matters have chosen rather to take it upon Credit, than give themselves that Trouble.

Now fince his time, as there have been many abortive Essays towards a perfect Quadrature, by those that knew not enough to see the impossibility thereof: So very much has been done towards facilitating the Calculus by Methods far differing from that of Archimede. And particularly the Doctrine of Fluxions, and of infinite Series, which may not improperly be called the Geometry of Curvelines (both invented by the most Illustrious Sir Isaac Newton) doth afford us many Solutions of this Problem. Amongst them it may not be improper to produce that, which of all performs it with the least Work, derived from the Tangent of 30 Degrees $\frac{1}{3}$. The Fluxion of the Tangent of an Arch, being to the Fluxion of the Arch it self, as the Square of the Secant to the

Square of the Radius, as is thus demonstrated.

54 An easy Quadrature of the Circle, from \$\sqrt{12}\$.

Let C be the Center of a Circle, CR the Radius=r, AR any Arch,

C R

R T its Tangent = t, and CAT its Secant. Draw the Line CaP infinitely near to CAT, and the Line TP will be the Fluxion of the Tangent = t, and Aa the Correspondent Fluxion of the Arch = a, With the Center C, and Radius CP draw the infinitely little Arch

Q P. Now ob similia Triangula TP: Q P:: CT: CR, and again, QP: Aa:: CT: CR = CA. Wherefore ex aquo TP: Aa:: CT: CR: that is, rr + tt, is to rr, as t to a. If therefore rrt be divided by rr + tt, the Quotient will be $t - \frac{tf}{r} + \frac{t^4 f}{r^4} - \frac{t^6 f}{r^6}$ $+\frac{t^2 t}{a^2}$, &c. = a the Fluxion of the Arch. Its integral or flowing Quantity will be the Arch it felf, viz. $t - \frac{t^3}{arr} + \frac{t^5}{crt} - \frac{t7}{7r^6}$ $+\frac{f^2}{0r^2}$, &c. Now the Radius being Unity, and the Tangent of 30. Degrees $\sqrt[4]{\frac{1}{3}}$, 'tis evident that $\frac{1}{3}\sqrt{\frac{1}{3}}$ is the Cube thereof, and $\frac{1}{9}\sqrt{\frac{1}{3}}$ the fifth Power: $\frac{1}{27}\sqrt{\frac{1}{3}}$ the 7th Power, &c. in infinitum. Whence 'tis obvious, that the Arch of 30 gr. is $=\sqrt{\frac{1}{3}}-\frac{1}{9}\sqrt{\frac{1}{3}}$ $+\frac{1}{45}\sqrt{\frac{1}{3}}-\frac{1}{189}\sqrt{\frac{1}{3}}$, &c. or $\sqrt{\frac{1}{3}}\times 1-\frac{1}{9}+\frac{1}{45}-\frac{1}{189}+\frac{1}{729}$ &c. Six times this Arch is the Semi-circumference of the Circle, whose Radius is Unity; or the whole Circumference, when the Diameter is Unity. Therefore $\sqrt{12}$ or $2\sqrt{3} \times 1 - \frac{1}{6} + \frac{1}{46}$ $\frac{\tau}{189} + \frac{1}{729}$, &c. is equal to the faid Circumference. Hence the Rule: Divide the square Root of 12 continually by 3, and the several Quotients again by all the Odd Numbers successively, spiz. the first quote by 3, the second by 5, the third by 7, &c. Then to the 12 add the $\frac{1}{c}$ of the fecond Quote, $\frac{1}{c}$ of the fourth, $\frac{1}{12}$ of the fixth, e. in infinitum, and from the Sum substract - of the first Quote, 1 of the third, 1 of the fifth, &c. in infinitum, and the Remainder shall be the Circumference sought, Aα An Example of this Process take as follows, the square Root of 12 being 3,4641,0161,5138—

| 1) | 3-4641 0161 5138 | (3 | .4641 0161 5138 = | =/ 12 |

This Work being to be perform'd in little more than half an hours time is more than sufficient to exhibit the Circumference of the Globe of the Earth so truly, as not to err the breadth of a Grain of Sand in the whole, and the Compendium of this Method has tempted the ready Pen of the most Incomparable Mr. SHARP to continue it to double the famous Number of Van Ceulen. Which is a degree of Exactness far sutpassing all belief; for it is more than sufficient to give the Number of Grains of Sand that may be comprehended within the Sphere of the fiz'd Stars, it being greater than the Cube of 12000 x 5280 x 8000 x 100000 x 100000. which consists but of 65 Places, taking all the Dimensions with the most. So that here you have the Dimensio Girculi, and the Arenarius of Archimede both in one. Hence it appears, that Van Ceulen's Number is true. And all sixture Squarers of the Circle may please to square their Work by this Rule, and not expose themselves by obtruding their salse reasoning on the World.

The QUADRATURE of the CIRCLE

6211 8108 6286 867 670 1455 7537 9937 73 2039 0017 0428 104 5182 2056 11 4223 8642 1 50629728 3850 258 6136 6605 7454 898; 9987 6640 8664 25079749 1368 7979 1498270 750530 8742 4158 933 16403 0.0 × 277) 2J J'8 x 281) 2 91'× 285) 6° 5x 273) 24 ~ (692 × 1.0 o** × 264) 24 9**×257)24/3 963×253)24 7× 249) 2√ 0°5× 261)2 301 × 245) 24 9°× 241) 243 950×237) 2. 957× 229) 24 9 5 × 22 5) 2 9°°× 221) 2,

The raising these Powers is still somewhat more troublesom, yet not above one third part are requir'd.

Tho' no other Method of obtaining the Quadrature of the Circle can be expected equalling that of Mr. Halley's by 12 in Facility and Exactness, yet the Three preceeding deduced from the same Principles may perhaps exceed any other yet discover'd, and serve for a Confirmation as far they extend.

The

Another easy Method to find the Quadrature of the Circle, from V 12=243=3.4641.0161.5137.7544.8705.48928 6830.11744733 8856.1050.7620.7612.5611.1613.9589.0386.6033 8176.0007.4162.2923.7351.4497.1513. + I. Divide $\sqrt{12}$ continually by 9 which will give all the Powers necessary for this Purpose.

II. Multiply those Powers respectively by this Series of Arithmetical Proportionals $\frac{1}{2}$, $\frac{1}{2}$, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$

Mathematical TABLES,

Contrived after a most Comprehensive Method:

VIZ.

A TABLE of Logarithms, from 1 to 10100. To which is added (upon the same Page) The Differences and Proportional Parts, whereby the Logarithm of any Number under 10,000,000 may easily be found.

TABLES of Natural Sines, Tangents, and Secants, with their Logarithms, and Logarithmetick Differences to every Minute of the Quadrant.

TABLES of Natural Versed Sines, and their Logarithms, to every Minute of the Quadrant.

AND

A TABLE of Difference of Latitude and Departure to every Degree and Quarter-Point of the Compass: The Radius 10000.

LONDON:

Printed by S. Bridge, for Jer. Seller and Cha. Price, at Hermitage-Stairs in Wapping; and John Senex, next Door to the Fleece-Tavern in Cornbill. 1709.

The End of the Table of Logarithms.

against which is plac'd the Difference; which Difference multiply by the Decimal of the Second and 12" given, and add the Product to the Log. before found, their Summ is the Log. fought.

Ex. What is the Log. of the

Sine of 1 Deg. 45' 5" 24""?

Anf. 8.4852182.

I find in the Table she Size

I find in the Table the Sine of 1 Deg. 45', viz. 305.385. Log. 8.4848479. Diff. 41153. Product 3703.77

Product 3703.77 .09 Sum 8.4852182 .2703.77 Their Summ, viz. 8.4852182 is the Log. fought.

It may be done without the Table thus, Multiply 41153, the Diff. by $5'' \cdot \frac{1}{40}$ (equal to $5'' \cdot 24'''$) and divide the Product by 60, the Quotient will be 3703.77, as before.

If the Log. be given, take the nearest Log. that is less, and substract it from the Log. given, then divide the Remainder by the common Diff. the Quotient is the Decimal of the Second and Third sought.

Ex. The Log. Sine 8.4852182 is given, What is the Deg. Min. Second and Third, that belongs to it? Anf. 1 Deg. 45' (9 or .09 the Docimal of) 5" 24".

Log. given 8.4852182.77 1 Deg. 45' Log. 8.4848479

Diff. 41153)3703.77(.09
The Quotient .09 is the Decimal of the Answer, viz.
5" 24":
It may be done without the

It may be done without the Table thus, Multiply the Remainder 3703.77 by 60, and divide the Product by the Diff. 41153, the Quotient will be 5"4" (equal to 5"24") as before

Note, That the following Tables are placed in such order, that the Column of Logarithms on each fide the Differences are Complements Arithmetical to each other, and the Column of Differences in the middle is common to them both.

TABLES

Natural Sines, Tangents, Secants, Vers'd Sines,

And their Logarithms,

To every Minute of the QUADRANT.

The END of the TABLES.

SOME USES

Of the Preceding

CHAP. I.

Of Decimal Fractions,

HE Table of Logarithms being of general Use in all parts of the Mathematicks, cannot well be apply'd without some Knowledge of Decimal Fractions; which, of all Fractions, are most Natural, whole Numbers being nothing else in effect: So that Arithmetick in whole Numbers being understood, the Use of Decimal Fractions is very easily learnt.

I. That the Nature of a Decimal Fraction may be conceived, imagine a Foot Rule (or any other Measure) to be divided into 10 equal parts, each division will be 4; then imagine every of those Tenths to be divided into 10 equal parts, then the Foot (or other measure) will be divided into 100 equal parts, every first Division will be 15, or 18, and every second Division, in respect to the whole, will be 180; so that if 3 tenths and a half were to be exprest, it's 100. By this means, an Hour, a Fathom, a Pound, a Shilling, &c. may be divided into 10, 100,

1000, 10000, &c. equal parts, at pleasure.

II. A Decimal Fraction hath always for its Denominator an Unite with Cyphers, viz. 10, 100, 1000, 10000, &c. and feeing the use of a Denominator in a Fraction is to shew into how many parts an Unite is divided, it may be quite omitted; and yet known by this Rule, viz. The Denominator of a Decimal Fraction is an Unite, with so many Cyphers as there are places in the Numerator, and is known from whole Numbers by a point prefix'd, thus: .2 is 10. .34 is 10. .567 is 1607, .0089 is 150000 oc. Observe the same of mixt Numbers; for 678.9 is 67878, 67.89 is 67160, 6.789 is 61780, 6.789Çq.

HI. Cyphery

III. Cyphers at the right hand of a Decimal Fraction alter not the Value; for x_1 is x_2 , x_3 is x_4 , x_5 , x_5 is x_6 , x_6 , x_7 , x_7 , x_7 , x_8 , x

IV. Therefore Decimal Fractions are easily reduced to a common Denominator, by making all their Numerators to conflict of the same number of places; so .3 .45 .067 .0089, may be writ thus .3000 .4500 .0670 .0989; all which consisting of four places, their common Denominator is an Unite, and sour Cyphers, vit. 10000

V. Addition and Subtraction are the same as in whole Numbers, the places of the same Denomination being set one under another, it will be a good Guide to place Point under Point: See three Examples of each.

| | Additio | n. | | Subtraction | 1. |
|---------------------|-----------------------|-----------------------------|-------------|-------------|--------------|
| -3 -45 -06789 | 1.5 .5625 .9375 | 121.5 45.5605 75-9375 | 9.75 8.5 | 6.5 3.75 | 89 73-497 |
| .81789 | 3.0000 | 242.9980 | 1.25 | 2.75 | 15.503 |

VI. In Multiplication, work as in whole Numbers, and from the Product separate with a point so many places to the right hand as there are decimal places both in the Multiplicand and Multiplier, then all the places upon the left hand of the point are whole Numbers, and on the right a decimal Fraction.

VII. If there be not so many places in the Product, as ought to be separated by the preceding Rule, then place Cyphers at the left to compleat the Number, as may be seen in the Sixth

and Seventh Examples.

| j | Ex.1) 456 | Ex.2) 45,6 | Ex.4) 45.6 | Ex 6) .456 |
|---|-----------|------------|------------|-------------|
| 1 | 21.3 | 21.3 | -213 | .213 |
| 1 | 1368 | 971.28 | 9.7128 | .097128 |
| | 456 | Ex.3) 456 | Ex.5) .456 | Ex.7) .0456 |
| 1 | 912 | .213 | 2.13 | .213 |
| 1 | 97128 | 97.128 | .97128 | .0097128 |

VIII. In Division, work as in whole Numbers, and from the Quotient separate with a point so many places to the right hand (for a decimal Fraction) as there are decimal places in the Dividend more than in the Divisor; for there must be so many decimal places in the Divisor and Quotient, as are in the Dividend.

IX. Another

IX. Another method of finding the Value of the Quotient before the Division begin, viz. Set the Divisor under the Dividend, then will the Unit's place in the Divisor stand under such a place in the Dividend, as is at the same distance from Unity with the first fignificant Figures of the Quotient, as in the 234890.00 (.347.98 Examples first and last: First, Here 5, the Unit's place in the Divisor, stands under 8, the third Figure above Unity in the Dividend; denoting, that 3, the first Figure of the Quotient, is of the same Value, and that here are three Integers and two Decimals in the Quote: In the last, the Cypher preceding of in .023489000 (:03479**8** the Divisor, which is the place of Unity, 0.675 rests under 2 in the Dividend; shewing, that 3 in the Quotient shall be of the same value, viz. two places below Unity.

X. Therefore, if the Divisor be a whole Number, the Quotient will have the same number of decimal places as the Dividend, as Ex.1. If the Dividend confists of six decimal places, and the Divisor but of two, there will be four decimal places in the

Quotient, as.Ex. 3.

XI. If there be more decimal places in the Dividend, than are in the Divisor and Quotient, place Cyphers at the left hand of the Quotient, to compleat the Number. See the 5th Example, where one Cypher is prefix'd.

XII. Annex what number of Cyphers you please to the right

hand of the Dividend, putting a Divisor. Dividend. Quotient. point where the Fraction begins, 234890.00 (347.98 (see Rule 3.) But if the Dividend 675) 2348.9000 (34.798 be made to have three decimal 67.5) places more than in the Divisor, 23.489000 (3.4798 6.75) there will be three decimal places .675) .23489000 (.34798 .675) .023489000 (.034798 in the Quotient; which, in most cases is sufficient, except it is to be multiply'd afterwards.

XIII. Vulgar Fractions are reduced to Decimals of the same

value, by dividing the Numerator by the Denominator.

Example, What is the Decimal of 9 d? (viz. 370 of 1 lib.)

fee the Work 240) 9.0000 (.0375...

Decimals being well understood, will make the following Uses of Logarithms very easie,

Of finding the Logarithm to any Number, or the Number to any Logarithm, emplain'd in the following Propositions.

L. To find the Logarithm of a whole Number, under 1000.

N the four first Pages of the Table, are placed all absolute Numbers from 1 to 999, in their natural Order, and against every Number its Logarithm; so the Log. of 43 is

i 633468<u>5</u>,

Note, The Index, or Characteristick of the Logarithm of every Number, from 100 to 999 being 2, it is placed over each Column of Logarithms, and are to be prefix'd to every Logarithm in the same Column; so the Log. of 430 is 2.6334685, and the Log. of 999 is 2.9995655, so of the rest.

11. To find the Logarithm of any Number, that confifts of four places.

Find the Number propounded in the first Column (of the Table) intitled Num. against which in the fecond Column (figned at the Head 0) is

1000 is 3.0000000 2004 is 3.0017837 9959 is 3.9982157 9999 is 3.9999966 found the Log. fought, when 3 (the proper Index of all absolute Numbers confifting of four places) is prefix'd; as may be feen in the adjoyning Examples.

III. To find the Logarithm of any Number, that confifts of five places?

Find the four first Figures of the Number given by the last Prop. and spainft it in the next Column are the three first Figares of the Log. fought, which note in your Paper; then feek the last Figure of the Number given amongst the Figures at the head of the Table, and in the common meeting of these two lines, are the four last Figures of the Log. sought, which must be annexed to the three before found, (before which a proper Index being prefix'd) is the Log. fought. Example, 54237 being given, I find 5423 (the four first Figures) in the first Column, against which in the next Column the three common Figures are 734; and the last Figure of the Number given, viz. 7, I find at the head of the Table, under which, and against \$423, are these four Figures, viz. 2957, which being joyn'd to the three Figures before found, viz. 734, it will stand thus 7342957; before which the proper Index being plac'd, the Log. of 54237 is found to be 4.7342957.

Note, That when the four last Figures of the Logarithm begin with a Cypher, then prefix to them the three common Figures (in the second Column) that follow in the next line below, thus 7 For the Logarithm of 54453, instead of the three common

Figures

Figures above, viz. 735. take the three common Figures in the line below, viz. 736; so the Log. of 54453, is not 4.7350218; but 4.7360218. The same is to be observed in all that follow in the same line.

IV. To find the Logarithm of a Number, consisting of six places.

Find the Log. of the five first Figures by the last Prop. and note the common Difference in the last Column but one, then look that Difference in the last Column, sign'd at the head Pts. and at bottom Pro. (which stands for Parts Proportional.) Against the fixth Figure of the Number given, is a Number, which being added to the Log. of the five places before found, is the Log. sought, when the proper Index, viz. 5, is prefix'd. Example, 542375 being given, the Log. of 54237 is found (by the last Prop.) to be 7342957, and the common Difference is 80, and in the last Column against 5, the last Figure, I find 40, which being added to 7342957, makes 5.7342997, which is the Log. of 542375, which was sought.

Note, That the Proportional Part may be found (without the Table of Parts Proportional in the last Column) thus: Multiply 80, the common Difference, by the fixth place, (which in this Example is 5) then divide it by 10, will give 40, as before. By this Proportion is made the Table, intitled Prs. Pro. in the last

Column.

V. To find the Logarithm of a Number confifting of seven places.

Find the first five places by Prop. III. and of the fixth place by the last; and for the seventh place, divide the Part Proportional by 10, (that is, set it one place farther to the right hand, than the last Figure of the Logarithm reaches) Pts then add it to the Logarithm of the fix places before 80 found, their Sum is the Logarithm fought; so the Logarithm of \$423758 is found to be 6.7343003: See the Mar- Num. 2-16 Logarithm. gin, where is represented the 54237 Sum of the IIId, IVth, and 47342957 Diff 3-24 4-32 42 80 5-49 this Vth Prop. 542375 5-7342997 Note, That the Part Propor-6-48 47,42957 7-56 tional may be found (without 8-64 the Table in the last Column) 19-72 for the two last places, by multiplying them by the common 5423758 6.73+3003 Pro

Difference, and then dividing the Product by 100; so in the last Example, 80 multiply'd by the two last Rigures, viz. 58, produces 4540; then divided by 100 Quotes 45.4, as before.

VI. A Fraction being given, to find its Logarithm, fubtract the Logarithm of the Denominator from the Log. of the Numerator, the Remainder is the Log. fought, and is always the

Logarithm of a Decimal Fraction.

Note, That the easiest and most useful way to find the Logarithm of a Fraction, is this; suppose the Index of the Log. of all Numbers from 1 to 10 to be 10 or 100 from 10 to 100 to be 11 or 101 from 100 to 1000 to be 12, or 102, from 1000 to 10000 to be 13 or 103 and so upwards. This being allowed the Index of the Log. of a Number, one place below Unity, must be 9 or 99, if two places below Unity, it must be 8 or 98, if three places, then the Index must be 7 or 97, if sour places then 6 or 96, the latter of these ways is often convenient to distinguish the Index of a whole Number, from that of a decimal Fraction, and often necessary when the Power or Root of a decimal Fraction is required, as in the next Chapter.

From which subtract the Denominator, viz. 4 Log. 0.6020600
The Remainder is the Log. of .75Log. -9.8750613

Note, That the Denominator of a proper Fraction is always greater than its Numerator; so the supposing the Index of the Log. of 3 to be 10 or 100, the Index of the Remainder will be 9 or 99 (that is one place below Unity) and the rest of the Log. except the Index, is found in the Table of Logarithms to answer to 75, 750, 7500, .0075, .075, .75, or any other Number, whose two significant Figures are 75, and those which follow or precede all Cyphers. It was the former of these ways, Mr. Briggs and Mr. Gunter made the Characteristicks of their Tables of Logarithmetick Sines and Tangents; where it may be noted, when the Natural Sine or Tangent is a decimal Fraction only, the Index is under 10; but where it is a mixt Number, there the Index is 10 or more. For Example: The Natural Tangent of 5 Degrees is \$874887, the Artificial is 8.9419518; and the Natural Tangent of 85 Degrees is 11.430052, the Artificial is 11.0580482. It is needless to use these new Indices, except some Term given or fought be less than an Unite.

VII. To find the Logarithm of a mixt Number.

Reduce the Number given into an improper Fraction, then fubtract the Logarithm of the Denominator from the Log. of the Numerator, the Remainder is the Logarithm fought.

Example, Let 4% be the mixt Number given; this, reduced

to an improper Fraction, is 4.

The Logarithm of the Numerator, viz. 57, is 1.7558748
The Logarithm of the Denominator, viz. 12, is 1.0791812
The Logarithm of 472, equal to 4725, whose Log. is 0.6766936

и

A Logarithm being given, to find the Corresponding Number. 7

If the Fraction annex'd be a Decimal, seek for it as if it was a whole Number, observing to prefix to its Logarithm a fuitable Index, which always is an Unit less than the number of places. in the whole Number, to which it belongs; which is further illustrated by the adjoyning Table,

where the Logarithms, except the Index, are the same in these Eight Examples: The Index of the Log. of 47500 is 4, because the absolute Number confifts of 5 places: For the same Reason, in 475, the Index of its Log. is 2; in 47.5, it is 1; but the Index of a proper decimal Fraction is so many Units, as the Cyphers before it wants of 9 or 99, .00475 | 970r 7.6766936 so the Index of .0475 is 8 or 98, and of 00475 is 7 or 97.

Numb. Logarithm. 4.6766936 4.7500 3.6766936 4750 **2.67**66936 475 1.6766936 47.5 0.6766936 475 99**0r 9.6766936** -475 98 or 8.6766936 .0475

VIII. To find the Number that answers to any given Logarithm.

Find the three first Figures (except the Index) of the Log. given in the second Column, and the four last in the same, or in some of the nine following; where, if you find it exactly, you have your defire; when so many places at the right hand of the Number sought, are prick'd off for a decimal Fraction, as will leave the whole Number more by one place, than there are Units

in the Index of the Log. given.

Example, The Number answering to this Log. viz. 2.7341957, being fought, I look in the second Column for 734, (the three first Figures) and having found them, I look for the four last among the ten Columns at the right hand, and find under the Figure of 7, is 2957; so I conclude, 54237 is the Number sought, (whose Log. without its Index, is 7342957) but then I consider, that the Index of the Log. given is 2, therefore the three places at the left is a whole Number, and the two last a decimal Fraction, viz. 542.37; if the Index had been 3, it would have been 5423.7; if the Index had been 4, then the absolute Number sought had been 54237; if the Index had been -9 or 99 the Number fought had been .54237. You may see, in all these Examples, the Log. is the same, except the lindex. I am the more Explicit in this, both here and before, because the Use of Logarithms is very much obscured, if it be not understood: Which makes Sir Jonas Moor fay, in his Arithmetick, That the Canon of Logarithms is in every Man's hand, but their perfect Use in decimal Fractions known but to few.

IX. If the Logarithm given be not found exactly in the Table, take the nearest that is less, and subtract it from the Log. sought, what remains look for in the Parts Proportional (of its common Difference) for the nearest Number less than the Remainder, against which is a sixth Figure to be placed at the right hand of the five Figures before found; and in case the Part Proportional be not found exactly, subtract it from the first Remainder, then place a Cypher at the right hand of the last Remainder (in the manner of a decimal Fraction;) last of all, against the nearest Part Proportional (either bigger or less) is a seventh Figure to be placed at the right hand of the fix Figures before found.

Note, That without the Table of Parts Proportional, the Number answering to any Logarithm, not exceeding 9 999 999, may be thus found, viz. Find (by the foregoing Directions) the nearest Log. that is less, and subtract it from the Log. given; then annex two Cyphers to the right hand of the Remainder, and divide it by the common Difference, the Quotient gives two Figures to be placed on the right hand of the Number answering to the first found Logarithm.

CHAP. III. Of Logarithmical Arithmetick.

I. I N Multiplication, add the Log. of the Multiplicand and Multiplier together, their Sum is the Log. of the Product.

Ex. Mul. 8.5 Log. 0.9294189

by 10 Log. 1.0000000

Product 85 Log. 1.9294189

II. In Division, subtract the Log, of the Divisor from the Log of the Dividend, the Remainder is the Log, of the Quotient.

Exam. 9712.8 Log. 3.9873444 Divid. by 456 Log. 2.6589648 Quotient 21.3 Log. 1.3283796

III. In the Rule of Three, add the Log. of the second and third Term together, and from their Sum subtract the Log. of the sirst the Remainder is the Log. of the fourth. Example, If Four Ells cost 9 l. what will Twelve Ells cost? Ans. 27 l.

The

The Log. of 4 0.6020600 The Log. of 9 0.9542425 The Log. of 12 1.0791812 The Log. of 108 2.0334257 The Log. of 27 1.4313037

Note. That if the Arith. Com. of the Log. of the first Term (which in this Example is 9.3979490) be added to the Log. of the second and third. The Refult will be the same.

IV. To find the Complement Arithmetical of a Logarithm. Begin at the left hand, and take the Complement of each Figure to 9, only under the last take its Complement to 10, which is all one with fabtracting the fame Logarithm from 10.0000000.

If there be two or more Logarithms

to be subtracted, take their Arith. Complements. Thus the Double Rule 7.4377071 of Three, in Logariebras, may be wrought by one Addition. Exem. If the Interest of 100l for 365 Days, is 61. what is the Interest of 51731, for 321, Anf. 272.9641? 22.4361058 = 272.9641.

8.000000 Co. Ar. 100 Co. Ar. 365 Log. of 6 0.7781512 3.7137425 Log. of \$173 2.5065050 Log. of 321

See the Work.

Of Raising of Powers by Logarithms.

V. Multiply the Log. of the Number given by the Index of the Power required, the Product will be the Log. of the Power lought, so the Log. of 32=1.5051500x3=45154500 the Log.

of 32768 which is the cube of 32.

VI. In the Multiplication, or Raising the Powers, viz. Squaring or Cubing, &c. of any decimal Fraction by Logarithms, the Index of the Logarithm of the Product or Power must consist of so many Units, as the number of Cyphers intercepted between the place of Unity, and the first fignificant Figure in the Natural Number, wants of 9, 99, 999, &c. only to the Index of the Logarithm of the Power, (i. e. the Square or Cube, &c.) there will be fuch a Figure prefix'd, as wants an Unit of the Index of that Power or Number by which the Logarithm was multiply'd; for Example, let the Cube of .009 be required, the Log of .009 is 7.9542425 x3=23.8627275=.000000729 the Cube of .009 and the Index of the Logarithm of the Power or Product is 3, therefore Six Cyphers must precede the first significant Figure of the Natural Number; and 2 is prefix'd, since the Index or Number multiplying was 3. But when the Number of Cyphers, preceding the fignificant Figures of the Power or Product, exceeds to. tis necessary to admit another Figure into the Index of the Logarithm, and make it the Complement to a Hundred: As suppose the 6th Power, or the Cubo-Cube of the Sine of od 1' be requir'd, its Logarithm in the Tables is 6.4637261; but in this Case must be 96.4637261, which multiply'd by 6, the Index of

the Power proposid; becomes 578.7823566, whose ladex being 78 subtracted from 99, leaves 21 for the Number of Cyphers that must precede the first Figure of the Natural Number or Power, which is occooocoocoocooocoo 58383. Here the Figure preceding the Index, as the Refult of the Multiplication, is 5, less by an Unit than the Number multiplying, being 6, the Index of the Power.

VII. This suggests a certain Rule for Extracting the Rosts of Fractions by the Logarithms: Viz. Prefix a Figure to the Index of the Logarithm of the Number, whose Root is to be extracted, less by an Unit than the Index proper to the Root requir'd, which is to be the Divisor; then divide the whole Logarithm, together with its Index and Number prefix'd, by that Index,

the Quotient is the Logarithm of the Root defired.

Ex. Gr. If the Cubo-cube-Root or Root of the Sixth Power of iodoocoocoocoocoocoocoocoog8383, whose Log. is 78.7823566, be demanded, prefix 6-1 i.e. 5 to its Index, it is then 578.7823566, which being divided by 6, the Index proper to the Root fought, the Quotient is 96.4637261, whose Natural Number is .0002908882, three Cyphers preceding the first Figure, because the Index 96 wants so much of 99. But when the Root of an Absolute Number is requir'd, there need no Figure be prefix'd to the Index of its Logarithm; fince it is always supposed, that the Index of the Power (which must be the Divisor) precedes it. Ex. Gr. If the Cube-Root of 6751269, whose Logarithm is 6.82993854, be required, 'tis an indifferent thing, whether 3, the Index of the Root to be extracted, be prefix'd or not, fince that alters nothing: For 3) 36.82993854 (Quotes 12.2764618, the Logarithm of 189, the Cube-Root fought.

VIII. Another Method to Raife any Power of a Decimal Fraction. Multiply the Arith. Comp. of the Log. of the Fraction given by

the Index of the Power required, the Arith. Com. of the Product is the Log. of the Power fought; For Instance, the .625 power of .0032 is found in the Mar-

gin to be .0275879.

Note, That so many Cyphers must precede the Fraction, as the Index of its Logarithm wants Units of 9, or 99. (as in pag. 6 and 7) which in this Example is one, and in the next 15. its Ar. Co. 8.4407187500 being always the same Number with the Index of the Product.

.0032 Log. 7.5051500 Arith, Com. 2.4948500 multiply'd by 124742500 49897000 149691000 Product 1.5592812500 the Log. of .0275879

Again, Let the 6.25 Power of .0032 be fought, the Log. of .0032 (as before) is 7.5051500, and its Arith. Comp. 2.4948500 × 6.25=15.5928125, its Arith. Comp. is 84.4071875, which and fwers to .00000,00000,00000,25538, which is the 6.25 power

of .0032.

IX. To Extract any Root of a Decimal Fraction, divide the Arith. Complement of the Log. of the Fraction given by the Index of the Root required, the Arith. Comp. of the Quotient is the Log. of the Root fought; For Instance, let the .625 Root of .0275879 be required, its Log. is 8.4407188, and its Arith; Comp. =1.5592812, divided by .625 the Quotient is 2.4948500, and its Arith. Comp. is 7.5051500, the Log. of .0032, which is the Root required.

Again, Let the 6.25 Root of .00000,00000,00000,25538. be required its Logarithm is 84 4071875, and its Arith. Comp. 15.5928125, divided by 6.25, the Quotient is 2.4948500, and its Arith. Comp. 7.5051500 the Log. of .0032, the Root re-

quired.

X. To find as many Mean Proportionals as are defired between any two Numbers given, subtract the Log. of the least Term from the Log. of the greatest, and divide the Remainder by a Number more by one then the number of Means defired, then add the Quotient to the Log. of the least Term (or subtract it from the Log. of the greatest) continually, and it will give the Logarithms of all the Mean Proportionals required. Example, Let Three Mean Proportionals be sought, between 106 and 100.

The Log. of 106 2.0253059. The Log. of 100 2.0000000

Divided by 4)0.0253059(0.0063164.75 the Log. Quotient. =(1)

The Log. of the least term 100 2.0000000 (2)
The first Mean, 101.4673846 2.0063264.75 (3)=1+2The second, viz. 102.9563014 2.0126529.5 (4)=1+3The third, viz. 104. 4670483 2.0189794.25 (5)=1+4The greatest Term 106. 2.0253059 (6)=1-5

If of 11 Mean Proportionals, between 106 and 100, the 9th Mean was required, divide the Remainder by 12, and multiply the Quotient by 9, and add it to the least term; or multiply it by 3, and subtract it from the greatest, it will give the Log. of the 9th Mean Proportional required, and is the same with the Third in the foregoing Example.

CHAP. IV.

The Resolution of the Cases of Right-line Triangles, by Logarithms.

HUS far we have shewed the Use of the Logarithms of the Chiliads: Now we will shew the Use of the same, together with the Logarithms of the Canon of Triangles, and that in the Resolution of Right-line Triangles.

Wherein, this is generally to be observed, that when we say The Sine, Tangent, &c. we mean The Logarithms of the same Sine, Tangent, &c. in the abovesaid

Canon.

Figure II.

Prop. I. Having the three Angles, and one fide, to find either of the other fides.

Add the Logarithm of the given fide to the Sine of the Angle, opposed to the side required, and from the Sum subtract the Sine of the Angle opposed to the given side, the remainder will be the Logarithm of the side required.

For Example: In the Triangle BCE, having the Angle CEB go grad. CBE 51 grad. 56 min. BCE 38 grad. 4 min. and the fide BE 197.3; we would know the fide CE

2.29/12-71
9.99613-69
12.1913-640
9.78998-80
the fine of 38 grad. 4 min.
2.29/12-71
the log of 1912-92-78 for CB required.

Or you may add the Arithmetical Complement of the Sine of the Angle opposed to the given side, to the two other Logarithms, and the Sum shall be the Logarithm of the fide required. as we have shewed in the IIId Chapter, Propotion IV. And it is to be noted, that the Arithmetical Complements of the Sines in the Canon are to be found in the Columns of the Secants: For (neglecting the first Unit) the Secants of the Complements of the same Archs, whereof the Sines are expressed in the Canon, are the Arithmetical Complements of the same Sines. For Example: The Sine of 38 grad. 4 min. being 9.7899880, the Secant of 61 grad, 56 min. the Complement thereof is 10.2100120, which (neglecting the the first Unit) is the Arithmetical Complement of the faid Sine.

0.21001.20 the Ar.Co.of the fine 38 gr. 4m. 2.29712.71 the log. of 197.3 9.89613.69 the fine of 51 grad. 56 min. 12.40127.60 the log. of 251.9278, as before

But if one lide of a Rectangle Triangle, and the Angles be known, and you would have the other fide, as in the former Example, the Ope-

ration will be easier, thus;

Add the Tangent of the Angle opposite to the side required, to the Logarithm of the given fide, and from the Sum subtract the Radius, the Remainder shall be the Logarithm of the fide required.

20.1061488 the Tangent of 91 grad. 56 th 2.39112.71 the log. of 197-3 12-40127-59 the log. of 251.9, as before.

Prop. II. Having two fides, and an Angle opposite to one of them; to find the other two Angles, and the third fide.

Add the Sine of the Angle given to the Logarithm of the lide opposed to an Angle required, and from the Sum subtract the Logarithm of the side opposed to the Angle given, the remainder shall be the Sine of the Angle opposite to the other side given.

For Example : In the Triangle ABC, the fide AC being 800, BC 320, and the Angle ABC 128 grad. 4 min. we would know the Angles BAC, ACB, and the fide AB.

9.89613.69 the fine of 128 grad. 4 min. 2.50515.00 the log. of 320.

12-40128.69 the fum. 2.90209.00 the log. of 800.

9.49819.69 the fine 18 gr. 21 m. for BAC.

Having BAC and ABC, the Angle ACB is their Complement 180 grad. viz. 33 grad. 35 min. and the fide AB you may find by the first Proposition.

Prop. III. Having two sides, and the Angle between them; to find the other two Angles, and the third side.

If the Angle included be right, add the Radius to the Logarithm of by the first Proposition.

the less side, and from the Sum subtract the Logarithm of the greater side, the Remainder shall be the Tangent of the Angle opposed to the less side.

For Example: In the Triangle BCE, the lide BE being 197.3, and CE 251.0, we would know the Angles BCE, CBE, and the Base.

12.39513-71 the Rad. added to log. of 197.5 2.40132-78 the log. of 251.9 9.89389.89 the Tang.of 38 gr. 4 m.forBCR.

But if the Angle included be oblique, add the Logarithm of the Difforence of the given sides to the Tangent of half the Sum of the Angles unknown, and from the Sum Subtract the Logarithm of the Sum of the given lides, the Remainder shall be the Tangent of the half of their Difference.

For Example: In the Triangle ABC, the side AB being 562, BC 320, and the Angle ABC 128 grad. 4 min. we would know the Angles BAC, ACB, and the

fide A.C.

The Sum of the given lides is 882, and the Difference 242, the half Sum of the Angles unknown is 25 grad. 58 min.

(fide given. 2.38381.94 the log. of 242 the Diff. of the 9.68774.08 the tan. of 25 gr. 58 m. the half fum of the Angle unknown.

12.07135.56 the fum. 2.94546.86 the log. of \$82, the fum of the fides given. 9.12588.70 the tangent of 7 grad. 37 min.

There, 7 grad. 37 min. being added to 25 grad. 58 min. the half Sum, of the Angles unknown, the Sum is 33 grad. 35 min. for the greater Angle ACB; and the fame, 7 grad. 37 min. being subtracted from 25 grad. 58 min. the Remainder is 18 grad. 21 min. for the less Angle CAB. Laftly, knowing three Angles, and two fides, the third may be found

Prop.

14 The Cases of Right lind Triangles solv'd by Logarithms.

Prop. IV. Having the three files; to find any Angle.

Add the three sides together, and take half the Sum thereof, and the Differences betwixt the same half Sum and each side. This done, add the Logarithms of the half Sum, and of the Difference betwixt the same half Sum and the Base, together. Add also the Logarithms of the Differences of the other two sides, and the the doubled Radius, together: Then out of this Sum subtract the sirft Sum, and half the Remainder will be the Tangent of half the Angle required.

For Example: In the Triangle ABC, the fide AB being 562, AC 800, and BC 320, we would know the Angle ABC.

A C 800 the base. A B 762 the fide. B C 320 the fide.

The fum 1682
The half fum 841 log. 2-92479-60
The dif-of AC 41 log. 1-61278-39
The fum 4-53757-99

The diff. of AB 279. log. 2.44560.42
The diff. of BC 521. log. 2.71683.77
Doubled Radius
The Sum 25.16244.19
The first Sum subtracted 4.53757.99
The Remainder 10.52426.20
Half the Remainder 10.31243.10 Tam.
of 64 gr. 2 min. whose double is 128 gr.
4 min. for ABC.

Or add the Arithmetical Complements of the Logarithm of half the Sum, and of the Difference betwixt the same half Sum and the Base, to the Logarithms of the two other Differences, and half the Sum shall be the Tangent of half the Angle required.

7.07520.40 the Ar.Co. of log. 84x 8.38721.61 the Ar.Co. of log. of 4x 2-44560.42 the log of 279. 2-71683.77 the log. of 521.

The Sum 20.62486.20 the Sum 10.31243.10 is the Tangents of 64 gr. amin. as before.

CHAP. V.

The Resolution of the Cases of Spherical Triangles, by Logarithms.

HE Resolution of the Spherical Triangles is to be done by the Canon of Triangles, which we shall shew by 28 Propositions sollowing, whereof 16 are of Rectangle, and 12 of Oblique Triangles; and first of the Rectangle.

Figure III.

Prop. I. Having the two fides; to find the 'Baje.

Add the Co-Sine of one fide, to the Co-Sine of the other fide, and

HE Resolution of the Spherical Triangles is to be done by the Canon of Triangles, Base required.

For Example: In the Rectangle ACB, having AC, 27 gr. 54 min, and BC 11 grad. 30 min. we would know the Base AB.

9.99119.27 the Co-Sine of 11 gr. 30 m.
9.94633.71 the Go-Sine of 27 gr. 54 m.
19.93752.98 the Co-Sine of 30 gr. 0 min.
for AB required.

Prop. II. Having the two fides; to find either of the Oblique Angles.

Add the Sine of the fide next the required Angle, to the Co-Tangent of the opposite fide, and from the Sum subtract the Radius, the Remainder is the Co-Tangent of the Angle required.

For Example: In the Rectangle ACB having AC 27 grad. 54 min. and BC 11 grad. 30 min. we would know the Angle BAC.

9.67018.07 the Sin. of next fide 27 gr. 54 m. 10.69153.74 the Co-Tang. of the opposite fide 11 grad. 30 min. 20.3617181 the Co-Tang. of 23 gr. 30 min. for B A C required.

Prop. III. Having the Base, and one of the Olique Angles; to find the other Oblique Angles.

Add the Co-Sine of the Base to the Tangent of the Angle given, and from the Sum subtract the Radius, the Remainder shall be the Co-Tangent of the Angle required.

For Example: In the Rectangle A C B, having the Base A B 30 grad. and the Angle A B C 69 gr. 22 min. we would know the Angle B A C.

9.9375306 the Co-Sine of the Base 30 gr. 10.42418.95 the Tang. of the Angle 69 gr. 10.36172.01 the Co-Tangent of 23 grad. 30 min. for BAC required.

Prop. IV. Having the Base, and one of the Oblique Angles; to find the side next unto the same Angle.

Add the Tangent of the Base to the Co-Sine of the Angle given, and from the Sum subtract the Radius, the Remainder is the Tangent of the side required.

For Example: In the Rectangle ACB, having the Base AB 30 grad. and the Angle ABC 69 grad. 22 min, we would know the fide BC.

9.76143.93 the Tang, of the Base 30 grad.
9.54701.88 the Co-Sine of the Angle 69 gr.
22 min.
19.30845.81 the Tangent of 11 gr. 30 min.
for BC required.

Prop. V. Having the Base, and one of the Oblique Angles; to find the side opposed to the same Angle.

Add the Sine of the Base to the Sine of the Angle given, and from the Sum subtract the Radius, the Remainder is the Sine of the side required.

For Example: In the Rectangle A CB having the Base A B, 30 grad. and the Angle B A C 23 grad. 30 min. we would know the side B C.

9.69897.00 the Sine of the Base, 30 grad. 9.60069.97 the Sine of the Aug. 23 gr. 30. 19.29966.97 the Sine of 11 grad. 30 min. for BC required.

Prop. VI. Having one of the sides, and the Oblique Angle next unto is; to find the Base.

Add the Co-Tangent of the Base given to the Co-Sine of the Angle given, and from the Sum subtract the Radius, the Remainder is the Co-Tangent of the Base required.

For Example: In the Rectangle A C B, having the fide A C 27 grad. 54 min. and the Angle B A C 23 gr. 30 min. we would know the base A B.

10.27615.63 the Co-tan. of the fide 27gr.54si 9.96239.77 the Co-tine of the Ang.23gr.30m 20.23855.40 the Co-tangent of 30 grad. for A B required.

Prop. VII. Having one of the sides, and the Oblique Angle next unto it; to find the other side.

Add the Sine of the fide given, and from the Sum fubtract the Radius, the Remainder is the Tangent of the fide required.

For

16 The Cufes of Spherical Triangles fold d by Logarithms.

For brample: In the Rectangle ACB having the fide AC 27 grad. 34 min. and the Angle BAC 23 grad. 30 min. we would know the fide BC.

9.67018.07 the Sine of the fide 27 gr. 54 m. 9.638 30.19 the Tan. of the Ang. 23 gr. 30 m. 39.30848.26 the Tangent of 11 grad. 30 min. for B C required.

Prop. VIII. Having one of the fides, and the Oblique Angle next auto it; to find the other Oblique Angle:

Add the Co-Sine of the fide given to the Sine of the Angle given, and from the Sum fubtrac: the Radius, the Remainder is the Co-Sine of the Angle required.

For Example: In the Rectangle ACB, laving the fide BC 11 grad. 30 min. and the Angle ABC 69 grad. 22 min. we would know the Angle BAC.

999119.27 the Co-fine of the fide 11 gr.30m ... 99712084 the Tan. of the ang. 69 gr. 22 m 29-96240.11 the Co-fine of 23 grad. 30 min. for BAC sequired.

Prop. IX. Having one of the fides, and the Angle opposed sente it; to find the Base.

Add the Radius to the Sine of the given fide, and from the Sum subtract the Sine of the Angle given, the Remainder is the Sine of the Base required.

For Example: In the Rectangle ACB, having the fide BC 11 grad. 50 min. and the Angle BAC 23 grad. 50 min. we would know the Base AB.

29.19965.93 the Radius added to the Sine of the fide 12 grad. 30 min.
9.60695.97 the Sine of the Angle 23 grad.
30 min.
9.66695.76 the Sine of 30 grad. for A B required.

Prop. X. Having one of the fider, and the Angle opposed note it; to find the other fide.

Add the Tangent of the given fide to the Co-Tangent of the given Angle, and from the Sum fubract the Radius, the Remainder is the Sine of the fide required.

For Example: In the Reclargle ACB, having the fide BC 11 grad. 30 min. and the Angle BAC 23 grad. 30 min. we would know the fide AC.

9-30846.26 the Tan. of the fide 11 gr. 30 m.
10-36169.81 the Co-Tan. of the Angle 23 gr.
34 min.
19-67016.07 the Sine of 27 grad. 54 min. for
A C required.

Prop. XI. Having one of the sides, and the Angle opposed unto it; to find the other Oblique Angle.

Add the Radius to the Co-Sine of the Angle given, and from the Sum subtract the Co-Sine of the side given, the Remainder is the Sine of the Angle required.

For Example: In the Rectangle ACB, having the fide BC 11 grad. 30 min. and the Angle BAC 23 gr. 30 min. we would know the Angle ABC.

19-96a39-77 the Radius added to the Co-fine
of the Angle 23 grad. 30 m.
9-99x19-27 the Co-fine of the fide 11 grad.
30 min.
9-97130-50 the Sine of 69 grad. 22 min. for
A B C required.

Prop. XII. Having one of the fides, and the Base; to find the Oblique Angles adjacent unto the same side.

Add the Tangent of the fide given to the Co-Tangent of the Base, and from the Sum subtract the Radius, the Remainder is the Co-Sine of the Angle required.

For Example: In the Rechangle ACB, having the side AC 27 grad. 54 min. and the Base AB 30 grad. we would know the Angle BAC.

9.72384.36 the Tane. of the fide 27 gr. 54m 10.12816.06 the Co-Tang. of the Ang. 30 gr. 19.96240.42 the Co-S ne of 23 grad. 30 min. for BAC required.

Prop. XIII. Having one of the fides, and the Base; to find the Angle appofed to she same side:

Add the Radius to the Sine of the fide given, and from the Sum subtract the Sine of the Base, the Remainder shall be the Sine of the Angle required.

For Example: In the Rectangle ACB, having the side BC 11 grad. 30 min. and the Base AB 30 grad. we would know the Angle BAC.

19.29965.53 the Radius added to the Sine of fide 11 grad. 30 min.

9.60063.53 the Sine of 23 grad. 30 min. for BAC required.

Prop. XIV. Having one of the fides, and the Base; to find the other side.

Add the Radius to the Co-Sine of the Base, and from the Sum subtract the Co-Sine of the fide given, the Remainder is the Co-Sine of the fide required.

For Example: In the Rectangle ACB, having the fide BC 11 grad. 20 min. and the Base AB 30 grad. we would know the fide AC

39-9375 3.06 the Radius added to the Co-Sine of the Base 30 grad. 9.99119.27 the Co-Sine of the side 11 grad.

9.94633.79 the Co-Sine of 19 eradi; 54 min. for AC required.

Prop. XV. Having the two Oblique Angles; to find the Base.

Add the Co-Tangent of one Angle given to the Co-Tangent of the

other Angle given and from the Sum subtract the Radius, the Remainder is the Co-Sine of the Base required.

For Example: In the Rectangle ACB, having the Angle BAC 23 grad. 30 min. and the Angle ABC 69 grad. 22 min. we would know the Base AB.

10.36165.35 the Co-tangent of 23 gr. 30 min.
9.57581.04 the Co-tangent of 69 gr. 22 min. 19.93750.85 the Co-fine of 30 grad. for AB required.

Prop. XVI. Having the two Oblique Angles; to find either of the sides.

Add the Radius to the Co-Sine of either Angle, and from the Sum fubtract the Sine of the other Angle, the Remainder shall be the Co-Sine of the fide opposite to the Angle, whose Co-Sine was taken.

For Example: In the Rectangle ACB, having the Angle BAC 23 grad. 30 min. and the Angle A B C 60 grad. 22 min. we would know

the fide BC.

19.96239 77 the Radius added to the Co-fine of BAC 23 grad. 30 min. 9.97120.34 the Sine ABC 69 grad. 22 min. 9.99118.93 she Co-fine of 11 grad. 30 min for BC required.

Figure IV.

Prop. XVII. Having the three sides to find any of the Angles.

Add the three sides, and take half the Sum, and the difference betwixt the same half Sum and the Base. This done, add the Sures of two fides together: Add also the Sine of half the Sum of the three sides, the Sine of the faid Difference, and the doubled Radius, together; then out of this Sum fubtract the first Sum, and half the Remainder shall be the Co-Sine of half the Angle required.

18 The Cases of Spherical Triangles solved by Logarithms.

SZP, having the fide ZS 40 grad. PS 70 grad, and PZ 38 gr. 30 min. we would know the Angle ZPS.

The Base Z S 40. 0
The fide P S 70. 0 the Sine 9.97298.58 The fide PZ 28.30 the Sine 9.79414.95 The Sum 148.30 the Sum 19.76713.53 The half Sum 74-15 the Sine 9.98338.05 The Differ. 34-15 the Sine 9.75035.79 The Differ. 34.15 the Sine 9.75035.79
The doubled Radius . . . 20.0000000 The double whereof is for the Angle ZPS 31 grad. 34 min.

Or instead of the Sines, which are to be subtracted, take their Arithmetical Complements, and add them to the Sines of half the Sum and of the faid Difference; then half the Sum shall be the Co-Sine of half the Angle required.

0.02701.42 the Ar. Co. of 70 grad. the fide. 0.20585.05 the Ar. Co. of 38 grad. the fide. 9.98338.05 the Sine of 74 gr. 15 m. half fum 9.75035.79 the Sine of 34 gr. 15 m. the diff. 19.96660.31 the Sum

9-98330.15 the half Sum is the Co-Sine of 19 gr. 47 min. and the double 21 grad. 34 min. the Angle ZPS required.

Prop. XVIII. Having the three Angles; to find any of the fides.

If for the greater Angle we take his Complement to 180 grad. the Angles shall be turned into sides, and the fides into Angles, and the Operation shall be the same, as in the former Proposition.

Prop. XIX. Having two Angles, and a fide opposed to one of them; to find the side opposed to the other Angle.

Add the Sine of the fide given to the Sine of the Angle opposed to the fide required, and from the opposed to the side given, the Re- we would know the side SP

For Example: In the Triangle mainder shall be the Sine of the side required.

For Example: In the Triangle SZP, having the Angle SZP 130 grad. 3 min. 12 sec. SPZ 31 grad. 34 min. 26 fec. and the lide ZS 40 grad. we would know the fide

9.80806.75 the Sine of the fide 40 grad. 9.88391.45 the Sine of the Ang. 130 gr.3.12 19.69198.20 the Sum. 9.71899.76 the Sine of the Angle 31 gr.34-16 9.97298.44 the Remainder, which is the

Prop. XX. Having two Angles, and a side opposed to one of them; to find the side between the Angles given.

Sine of 70gr. for PS required.

Let a Perpendicular fall from the Angle unknown, upon his oppolite fide: Then

Add the Co-Sine of the given Angle adjacent unto the given fide, to the Tangent of the given fide, and from the Sum subtract the Radius. the Remainder (hall be the Tangent of the first Arch.

This Arch shall be comprehended between the given Angle adjacent unto the given fide, and the Segment of the lide where the Perpendicular falls. Now the second Arch comprehended between the fame Segment and the other Angle, is to be found thus:

Add the Sine of the Arch found. to the Tangent of the given Angle adjacent unto the given side, and from the Sum fubtract the Tangent of the other given Angle, the Remainder shall be the Sine of the second Arch.

The first and second Arch being added together, or elfe subtracted, you shall have the side required.

For Example: In the Triangle SZP, having the Angle ZPS 31 grad. 24, 26, ZSP 30 grad. 28, 12, Sum subtract the Sine of the Angle and the side PZ 38 grad. 30 min.

9.93042.22

9.93042.22 the Co-Sine of 31 grad. 34,26, the adjacent Angle. 9.90060.52 the tangent of 38 grad. 30 min.
the fide given.
19.83102.74 the tangent of 34 erad. 7 and a
half min. for FR the rift arch

9.74896.30 the Sine of 34 grad. 7 and a half min. the Arch found.

9.78817.56 the tangent of 31 grad. 34, 26, the adjacent Angle. 19.53753.86 the Sum.

9.76962.83 the tangent of 30 grad. 28, 12, the other given Angle. 9.76791.03 the Sine of 35 gr. 52 min. and a half, for S.R. the 2d Arch.

Now in this Example, adding PR 34 grad. 7 1 min. (the first Arch) to SR 35 grad. 52 1 min. (the second Arch) the Sum 18 70 grad. for SP required. In like manner you may find the fide required, when the Perpendicular falls out of the Triangle propounded.

Prop. XXI. Having two Angles, and a fide opposed to one of them; to find the third Angle.

Let a Perpendicular fall from the Angle unknown, upon his oppolite fide: Then

Add the Co-Sine of the given fide to the Tangent of the adjacent Angle, and from the Sum subtract the Radius, the Remainder shall be the Co-Tangent of the fifth Angle to be found.

This Angle found shall be comprehended by the given side and the Perpendicular. Now the second Angle, comprehended by the Perpendicular and the file unknown, 15 to be found thus:

. Add the Sine of the Angle found, to the Co-Sine of the given Angle opposed to the given side, and from the Sum fubtract the Co-Sine of the other Angle given, the Remainder shall be the Sine of the second Angle

The first and second Angle being added together, or elle subtracted, you thall have the Angle required.

For Example: In the Triangle SZP, having the Angle ZPS 35 grad. 34, 26, ZSP 30 grad. 28, 12, and the side PZ 38 grad. 30 min. we would know the Angle SZP.

9.89354-44 the Co-fine of 38 grad. 30 min-the given fide.

9-78857-56 the tangent of 31 grad. 34, 26, the adjacent Angle.

19.68212-00 the Co-tangent of 64 gr. 18, 50, for P Z R, the first Angle. 9.99481.36 the Sine of 61 gr. 18, 50, the Angle found.

9.93545.67 the Co-Sine of 30 grad. 28, 12, the opposed Angle.

19.89026.93 the Sum. 9.93042.22 the Co-line of 31 grad. 34, 26, the adjacent Angle.

9.95984.71 the Sine of 65 grad. 44, 23, for SZR the fecond Angle, Now in this Example, adding

PZR 64 grad. 18, 50, (the first Angle) to SZR 65 grad. 44, 23, (the second Angle) the Sum is 130 grad. 3, 13, for the Angle SZP re-In like manner we may quited. and the third Angle, when the Perpendicular falls out of the Triangle propounded.

Prop. XXII. Having two sides, and the Angle between them; 10 find either of the other Angles.

Let a perpendicular fall from the angle unknown which you require not, upon his opposite side, then

Add the Co-fine of the given angle, to the Tangent of that given fide which is opposed to the angle required, and from the fum fubtract the Radius, the remainder shall be the Tangent of the first arch.

This arch found shall be comprehended between the given angle, and the fegment of the given fide where the perpendicular falls.

Now the second arch is comprehended between the tame fegment and the angle required. Then

Add the Sine of the first arch, to the Tangent of the given angle, and from the fum subtract the Sine of

S \$ 2

red.

For Example, In the Triangle SZP, having the fide PZ 38 gr. 50 min. PS 70 grad. and the Angle ZPS 31 gr. 34, 26, we would know the Angle PSZ.

9,93042,22 the Co-line of 31 gr. 34, 26, the Angle given.

7,90060,52 the Tan. of 38 gr. 30 m. the fide opposed to the Angle req.

19,83102,74 the Tan. of 34 Gr. 7 and a half min. the first arch found. 9,74896,30 the Sine of 34 Gr. 7 and a half min. the first arch found.

9,78877,76 the Tan. of 31 Gr. 34, 26, the Angle given. 19,53753,86 the Sum.

9,76791,15 the Sine of 35 Grad. 52 and a half m. the 2d arch found. 9,76962,71 the Tay. of 30 Gr. 28. min. for Z S P required.

To find both the Angles unknown. Add the Singe of half the difference of the given sides, to the Co-

the second archathe remainder shall I tangent of half the Angle given, and be the Tangent of the Angle requi- from the Sum subtract the Sign of half the Sum of the given fides, the remainder shall be the Tangent of half the difference of the Angles required.

Add also the Co-sine of half the difference of the given lides, to the Co-tangent of half the Angle given, and from the Sum subtract the Sine of half the Sum of the fides given the remainder shall be the Tangent of half the Sum of the Angles requi-

Then add the balf Difference of the Angles found, to the half Sum of the lame, and you shall have the greater Angle: And the fame half difference being subtracted from the half Sum, you shall have the lefs Angle required: As in the former Example.

The fide P Z 38 Gr. 30, 0. The fide PS 70 Gr. 0, 0. The form 108 Gr. 30, o. The half furn ... 54 Gr. 15, o. The diff. of the Sides 31 Gr. 30, o. The half diff. ... 15 Gr. 45. o. The sum 130 Gr. 3,12. for SZP. The diff. 30 Gr. 28, 12. for ZSP.

Prop. XXIII. Having two sides, and the Angle between them; to find the sbird fide.

Let a perpendicular fall from enther of the Angles unknown, upon his opposite side, then

Add the Co-line of the given angle, to the Tangent of the lide from whose end the perpendicular is let fall, and from the fum fubtract the Radius, the remainder shall be the Tangent of the first arch.

This arch shall be comprehended between the angle given, and the fegment of the fide where the perpendicular falls.

Now the second arch shall be comprehended between the same fegment, and the end of the fide required. Then

Add the Co-line of the second arch found, to the Co-fine of the fide from whose end the perpendicular falleth, and from the fum fubtract the Cofine of the first arch found, the remainder shall be the Co-sine of the side required. For

For Example, In the Triangle SZP, having the fide PZ 38 gr. 30 min. PS 70 grad, and the angle ZPS 31 gr. 34, 26, we would know the fide Z S.

9,93042,22 the Cofine of 31 Grad. 34,26, the angle given.
9,93060,52 the Tangent of 38 Grad. 30 m.
the fide P Z. 19,83102,74 the Taugest of 34 Grad. 7 and a balf m. for PR the first arch. 9,91793,36 the Co-fine of 34 Gr. 7 and a half min. the first arch. 9,90864.44 the O-fine of 35 Gr. 52 and a half m. for RS the 2d. arch. 9,89354,44 the Co-fine of 38 Gr. 30 m. the fide PZ 19,80218,88 the fum. 9,88425,52 the Co-fine of 40 Gr. for Z S the side required.

Prop. XXIV. Having two sides; and one Angle opposed to one of them; to find the Angle opposed to the other fide.

Add the Sine of the Angle given, to the Sine of the fide opposed to the Angle required, and from the fum subtract the Sine of the side opposed to the Angle given, the remainder shall be the Sine of the angle required.

For Example. In the Triangle SZP, having the fide PS 70 grad. ZS 40 grad. and the Angle SZP 130 grad. 3,12, we would know the angle'S PZ

9,88391,45 the Sine of 130 Gr. 3,12, the 9,80806,77 the Sine of 4. Gr. the fide opposed to the Angle required. 9,97298,58 the Sine of 70 Gr. the fide op-9,71899,62 the Size of 21 Gr. 34 min. for S P Z required.

Prop. XXV. Asving two sides, and one Angle opposed to one of them; to find the third side.

Let a perpendicular fall from the Angle between the sides given, upon his opposite side, then

Add the Co-fine of the Angle given, to the Tangent of the given side which is adjacent unto the same Angle, and from the fum fubtract the Radius, the remainder shall be the Tangent of the first arch.

This first arch shall be comprehended between the given Angle, and the segment of the side where the perpendicular falls. Now the second arch between the same segment and the end of the side required, shall be found thus.

Add the Co-fine of the first arch found, to the Co-fine of that given fide which is opposed to 'the Angle given, and from the Sum subtract the Co-sine of the other side given, the remainder shall be the Co-fine of the fecond Arch, the first and second Arch being added together, or elfe iubtracted, you shall have the side

required. For Example. In the Triangle SZP, having the fide PZ 38 grad. 30 min. SZ 40 grad, and the angle SPZ 31 grad. 34, 26, we would know the side P S

9.93042.22 the Co-fine of 31 Gr. 31,26, the Angle given.
9.90060 52 the Tangens of 38 Gr. 30 min. the adjacent fide. 19.83102.74 the Tan of 34 Gr. 7 and half min. for PR the first arch. 9:91793.36 the Co-fine of 34 Gr. 7 and a half m. for P R the first arch. 9.88415.40 the O fine of 40 Gr. the fide oppoied to the Angle given.
19.80218.76 the Sum. 9.89354.44 the Co fise of 38 Gr. 30 min. the other file gives.

9.90864.32 the Co-fine of 35 Gr. 52 and a half min. for S R the second

arch.

Now in this Example, P R 34 gr. 7 and a half min. (the first arch) being added to SR 35 gr. 52 and a half min. (the fecon l arch) the Sum is 70 grad, for PS the fide required.

Prop. XXVI. Having two sides, and one Angle opposed to one of them; to find the Angle between them.

Let a Perpendicular fall from the Angle between the fides given, upon his opposite side. Then

Add the Co-fine of that given Side which is adjacent unto the given Angle, to the Tangent of the same Angle, and from the Sum subtract the Radius, the remainder shall be the Co-tangent of the first Angle to be found.

This first Angle sound shall be comprehended by that given side which is adjacent unto the Angle given, and by the Perpendicular. Now the fecond Arch comprehended by the Perpendicular and the other given fide, is to be found thus,

Add the Co-fine of the first Angle found, to the Tangent of the given lide which is adjacent unto the Angle given, and from the Sum inbtract the Tangent of the other given side, the Remainder shall be the Co-sine of the second Angle to be found.

The Sum, or the Difference of the first and second Angle, shall be the

Angle required.

For Example. In the Triangle SZP, having the side PZ 38 gr. 30 min. SZ 40 grad. and the Angle SPZ 31 grad. 34,26, we would know the Angle SZP.

9.89354.44 the Co-fine of P Z 38 Gr. 30 m. the fide adjacent.

9.78857.56 the Tan. of SP Z 31 gr. 34,26, the Angle given.

19.68212.00 the Co-tam. of 64 Gr. 18, 50, for PZR the first Angle.
9.63692.96 the Co-fine of 64 Gr. 18,50, the Angle found.
9.90060.52 the Tangent of 38 Gr. 30 min.

the fide adjacent.

19.53753.48 the Sum. 9.92381.35 the Ties. of 40 Grad. the other given fice.

9,61372.13 the Co-fine of 6; Gr. 44,23. for S Z R the second Apple.

Now in this Example, adding PZR 64 grad. 18, 50, (the first Angle) to SZR 65 grad. 44, 23, (the second Angle) found, the Sum is 130 grad. 3,13. for S ZP the Angle required.

Here is to be noted, If you would add the Arithmetical Complement of a Tangent to the others instead of Subtraction, that they are expressed in the Canon: For (neglecting the first Unit on the left Hand) the Co-tangents of the Archs or Angels lefs then 49 grad, are the Arithmetical Complements thereof? but the Co-tangents of the Archior Angles greater then 45 grad. may be taken for Arithmetical Complements, if from the Sum be subtracted 2 on the left hand instead of an Unit.

Prop. XXVII. Having two Angles, and the fide between them; to find either of the other fides

Let a Perpendicular fall from that Angle given which is adjacent unto the fide required, upon his opposite fide. Then

Add the Co-fine of the given fide to the Tangent of that given Angle which is opposed to the side required, and from the Sum fuburact the Radius; the remainder shall be the Co-tangent of the first Angle to be found.

This Angle found shall be comprehended by the given lide, and the Perpendicular. Now the second Angle is comprehended by the Perpendicular and the fide required. Then

Add the Co-fine of the first Angle found, to the Tangent of the fide given, and from the Sum subtract the Co-fine of the fecond Angle found, the remainder shall be the Tangent of the fide required.

For Example. In the Triangle SZP, having the Angle SPZ 31 gr. 34,26. SZP 130 gr. 3, 12, and the

fide P Z 38 grad. 30 min. we would | half the Sum of the Angles: given ; know the fide S Z.

9.89354-44 the Co-fine of 38 Grad. 90 min. the fide given. 9.78857-46 the Ton. of 31 Grad. 34,46, the opposed Angle.

P Z R the first Angle.
9-63692.96 the O-fine of 64 Or. 18,70, the

single found. 9.90060.52 the Tas. of 38 Gr. 30 min. the

fide given. 19.53753,48 the Sum. 9.61372.21 the Co-fine of 65 Gr. 44, 22, the

second Angle. 9,91381.1 the Tennof 40 Gr. for S Z the fide required.

To find both the sides unknown

Add the Sine of half the Difference of the Angles given, to the Tangent of half the fide given, and from the Sum subtract the Sine of ample.

the remainder shall be the Tangent of half the Difference of the lides required.

Add also the Co-line of half the difference of the Angles given, to ... the Tangent of half the lide given, and from the Sam subtract the Cofine of half the Sum of the Angles given, the remainder shall be the Tangent of half the Sum of the file required.

Then add the half Difference of the tides found, to the half Sum of the same, and you shall have the greater fide; and the fame half Difference being subtracted from the half Sum, you shall have the less fide required. As in the former Ex-

and the side between them, to find the third Angle.

Let a Perpendicular fall from either of the Angles given, upon his opposite side. Then

Add the Co-fine of the Side given, to the Tangent of the given Angle, from which the Perpendicular falls not, and from the Sum fubrract the Radius; the remainder shall be the Co-tangent of the first Angle.

This Angle found shall be comprehended by the given Side and the know the Angle PSZ. Perpendicular. Now the second An-

Prop. XXVIII. Having two Angles, i, gle is comprehended by the Perpendicular and the Side opposed to the other Angle given. Then

Add the Sine of the second Angle found, to the Co-fine of that given Angle from which the Perpendicular falls not, and from the Sum subtract the Sine of the first Angle found; the remainder shall be the Co-fine of the Angle required.

For Example. In the Triangle SZP, having the Angle SZP 170 gr. 3,12. SPZ 3 gr. 34,26. and the Side PZ 38 gr. 30 min. we would

24

9 89354.44 the Co-fine of 38 Gr. 30 min. the | Side given.

9.78857.56 the Tax. of 31 Gr. 34, 26. 19.68212.00 the Co-tangent of 64 gr. 18, 500 for P Z R the first Angle. 9.95481.26 the Sine of 64 Grad. 18,50. the first Angle found.

9.95984-54 the Sior of 65 Gr: 44, 22, the femal Angle found.
9.93042.32. the O-fire of 31 Gr. 34, 26. 19.89016.76 the Sum. 9.53545.50 the Co-fine of 30 Grad. 28 min.

Chap. VI. The Use of the Table of Versed Sines.

The uses of the Table of Versed Sines are too aumerous to be here all treated of: I shall now only shew how by shem more easily to solve some of the most useful Cases of Spherical Trimgles, which alone is enough to merit their Publication. It has been a long time the Votes and Defires of many able Men in the Mathematicks, that such a Table might be collected and publish'd, but especially of that ingenious and ancient Student Mr. Folin Collins, who has expressed his defire thereof more than once in his elaborate pieces and from whom I had the Loan of some Foreign Tables, which did affift much towards the compoling of these.

Prop. 1. Two fides of an Oblique Spherical Triangle, with the Angle comprehended, being given, to find the 3d. fide,

As the Cube of the Radius : Is to the Rellangle of the Sines of the comprehended fides, : So is the Square of the Sine of half the commained Angle,: To baif the Difference of the Versed Sines of the 3d. side, And of the Ark of Difference be-

Which is thus, double the Log. Sine of half the Angle given, and thereto add the Log. Sines of the containing fides, and from the left Hand of the Sum, dash out 3 for the Cube of the Redim, so rests the Log, of balf the difference of those two Versed Sines.

Which half difference doubled and added to the Verfed Sine of the difference of the Legs or containing fides, gives the Versed Sine of the side sought.

Exam. 1. In the Triangle Figure 5. BPL, let there be given the fide BP 77° 00', the fide PL 40° 00', and the contained Angle BPL 52° 30', to find the fide B L

The Log. Sine 40° 00' . . 9.8080675 The Log. Sine of 77° 00' . . 9.9887239
The Log. Sine of 26° 19' 19.2914116

Is 1227355, whose double is: 2454710
The Natural Ver-Sine of 37°00'2013645 the dif. of the two fides is. The Verted Sine of 57° 53' the fide fought.

If you make the third Term, the Square of the Sine of half the Complement of the contained Angle to 180 degrees, you will find the half difference of the Verfed Sines of the third fide, and of the Sum of the two including fides to be doubled, and subtrasted from the Versed Sine of the said Sum.

But if instead of the second Term be taken into the Proportion. the double of the Rectangle of the Sines of the coataining fides, that is, if the Log, of the Number 2 be added to the Log. of the other middle Terms, you will have the Log. of the whole difference in the laft place; having found it, take the Natural Sine that flands against it, and add it to the Natural Versed Sine of the disference of the Lega, and the Sum is the Naural Versed Sine of the fide sought.

Exam. 2. Let the two containing fides be 38° 30' and 66° 30', and the outtained Angle be 20° 00'.

The log. Sine of 28° 30' 9.7941496
Th log. Sine of 66° 30' 9.9613978
The log. of the Number 2 . . 0.3010300
The log. Sine of 15° 00' daubled is 18.229914 The nearest Nat. Sine against 38.2835698

28 00 There remains . 300433 the Natur. Versed Sine of 53° 10.

This Prop. is of great Use to Calculate the Diffunces of Places on Earth, according to the Arch of a great Circle, by their Long. and Latit. given; the Diffances of Sears, by having their Declinations and Rightsafernsons, or Longitudes and Latitudes given, by means whereof the Altitudes of two Sears, or of the Sun with the Difference of time or The Natural Sine against ... 39.0882030 the Maridian, the Latitude may be found. CHAP.

GHAP. VII.

Of Compound Interest and Annuities, by Mr. Edm. Halley, Savilian Professor of Geo-metry in the University of Oxford, and F. R. S.

Principal life of Logarithms, is to folye all the Cafes of Compound Interest, which are not without great difficulty attainable by the Rules of Common Aziehe metick. But before we proceed to the practical part; it may perhaps not be improper to fay fomething of the Foundation or Demonstration of the Itules we are to give. Therefore let s be any Sum of Money forborn a Times : r the Rate of Interest, or produce of one Pound and its Interest in one time i that is us i to 4 fo one Pound to its amount, after one Year, or other Place of time? and let v be the amount of the Shin forbern witimes. Now becadie in one Year or Time unity becomes r, by the same reason r will in another time become regalidation in a gottime beodine in dragilt andcare that of or in valled to the Power, whose linder is the Number of Fire, will be the amount of one Pound forboin ratines, and therefore the work will be committee amounts. Wherefore multiply the Logarithm of A by sand to it aid the Logarithm; of s, the Sum shall be the Logarithm of v, which is the Solution of the light Problems is were not still homes A

II. r' is equal to therefore & from the Logarithm of v the Logarithm of c'be fabilitracted, and the remainder be divided by the Quote is the Logarithm of r

the Logarithms of w and s by the Logarithm of r: the Chota is a or the time wherein the Sum s will same untiply the Logarithm. It equal to semilers for if you multiply the Logarithm.

the semainder than be the Log. of the Principal sum.

Again,

Again, all Questions concerning the Rebate of Money are solv'd with the same Ease, and after the same manner: For if in any time, r becomes r, in the same time r becomes $\frac{1}{r}$, and in the shired $\frac{1}{r r}$, or, so that the Value or Present worth v, of any Sum s, after any time t, at the rate of r to r will be found to be $\frac{1}{r^2} = v$. Wherefore multiply the Log. of r by r, and subtract the Product from the Log. of s, the remainder will be the Log. of v: which finds the Value of any Sum of Money payable after any time assigned. Is. $\frac{1}{r} = r^2$. Therefore from the Log. of s substract the Log. of

v, and divide the remainder by t: the Quote will be the Log. of t

III. Divide the aforesaid difference of the Log of s and w by the Log. of r, the Quote shall be the Number of Years

Mote, That Examples to the preceding Cajes are at the beginning of this Book in pag. 11. IV. To find what Sum, payable after t times, may be purchased for v at the, rate of Interest v; the Theorem stands thus: multiply the Log. of v by t and to the Product add the Log. of v: the Sum shall be the Log. of s fought.

Here Note, because the Money is to be valued in Pounds and parts of 11 and the time in Years and parts of a Year, it will be most Commodious to reduce those Parts into Decimals (then the Work is the same as in whole Numbers) for which purpose the Two decimal Tables are annexed.

A decimal Table for every Farthing in 3d. and every 3d. in 1l.

| Farthings | 4 | 0 | 4 | 1 5 | | 12 | 5 | 13 | 3 | 14 | 5 | 5 | 5 | 15 | 3 | 7 | 8 | 18 | 1 | 91 | 114 |

The following Table snews the exact number of Days from any Day proposed in any Month, to the same day of any other Month throughout the Year: For Instance, from the 1, 10th or 20th of June to the 1, 10th or 20th of March is 273 Days. I find June at the Head and look down that Column, and over against March in a right Line is 273, so if it was from the 15 of June to the 16 of March. I consider, that the Number of Days is one more then 273, viz. 274 days. The same way is found any number of Days in any time under a Year by Inspection.

The Logarithms are also serviceable to resolve all Questions concerning the Amount or Present worth of Annuities, not paid as due, or purchased to be paid for time to come. Let therefore a be any Annuity or yearly Penfion, whose successive amounts for times past are art, and whose present Values are fuccessively, by what goes before: And the Series, &c. ari, ar^4 , ar^3 , ar^2 , ar, a, $\frac{a}{r}$, $\frac{a}{r^2}$, $\frac{a}{r^3}$, $\frac{a}{r^4}$, $\frac{a}{r^5}$. σc . will be a rank of mean Proportionals continued infinitely in the ratio of r to 1: now the Sum of all the Confequents, or of the whole infinite Series, will be to the faid Sum encreased by the next greater Term (or the Sum of all the Antecodents) as 1 to r (by 12.5 Elem. Eucl.) Wherefore putting y for the faid Sum of the Confequents r y will be equal to $y + ar^2$, the Sum of the Anteces dents; and $ry - y = ar^t$: and therefore $\frac{ar^t}{r-1}$ will be equal to y, the Sum of all our mean Proportionals, whereof art-1 is the greatest. And by the same Rule will be the Sum of all the Terms whereof - is the greatest. So that if we substract from the difference will be the Sum of all the terms, whereof art-1 is the greatest and a the least, their Numb. being t; which Sum we will call z. z therefore is thus to be expressed $\frac{a \times r^t - a}{a}$ = to the amount of the Annuity a forborn t times at the rate r. Wherefore from the Logarithm of a fubstrace the Log. of r-1, and to the remainder add the Log. of r'. From the Number answering to this last Sum, substruct the Number answering to the remainder, the Difference shall be the amount

Example, What will an Annuity of 34. 41. forborn 12 4 Years

amount to at 6 per Cent. per Annum.

ż

Log: 1 = 34.4 = 1,5355584.

Log: r-1 = 0.06 = 8,7781513.

Remainder 2.7584071 Numb. 573.333 &c.

Log: r^t = 03163237

3.0747308 Numb. 1187.7661

5144328 = 2

The Annuity, its amount, and the Rate of Interest being given to find the Time. By the foregoing Rule ** rt. $\frac{-a}{}$ = z therefore, z + X-35. Wherefore from the Log. of 16 flibftract the Logs of 7-1: to the natural Number found by the Remainder add the amount proposed, and from the Loga of the Sum substract the afore-found Remainder, which shall be the Log. of rt. This. divided by the Log. of r shall Quote the time required. Example, In what time will an Annuity of MAR smoont to 614 4328 at the rate of 6 per Cent. : Log. 1a = 34.4 = 1.5365584 Lag. 1-1=0.06=8.7781413 Remainder 2.7584071 Numb: 573 333 Ce. 614.432 Or. ,0253059) 0.3163237 (12 ½ Years = T. MIL The same Equation in order to find what Annuity being forhorn t. Years, at the rate re will amount to six is reduced to. - = 4, whence the Rule. To the Log. of the amount z add the Log of r-1, and from the Sum subtract the Log of r-1, the Number answering to the Remainder is the Logarithm of w. Example. An Annuity forborn 12 1 Years amounts at 6 per Cent, to the Sum of 614 l. 4328, how much is that Annuity. Log. z = 2.7884744. 0,0253059Log. r-1 = 8.7781513 12. 1.5666257 0.0126530 0.0300671 0,3036708 Log. # 1.5365586 0,3163238 Log. 2 = 2,071685 Log. 5.0300671 =1,071685 = r-1 4 = 34,4. VI. In order to find r, the same Equation is reduced to $\frac{2}{r}$ —t $= \frac{1}{r} - r^{t}$. or in our present Case 16.8614 = 17,8614 $r - r^{t}$.

Which is so affected as not readily to be resolved by the Gene-

ral method for Resolution of Equations, unless we can first approach it by some other means. For which purpose take the sollowing Rule (which will suffice where extream Exactness is not demanded.) Let $\frac{t-1}{\sqrt{at}} = 1 + y$, and let $\frac{d}{t+1} = b$. I say, that $\sqrt{bb} + 2by - b$ is exceeding near the Increase of the Rate or r-1.

that $\sqrt{bb+2by-b}$ is exceeding near the Increase of the Rate or r-1.

Wherefore from Log. of the Amount, substract the Sum of the Logni of the Time and Annuity, and the Remainder divide by $\frac{r-1}{2}$. The Quote shall be the Log. of 1+y. From the Logi of 6, substract the Log. of t+1, and to b the Number answering to the Remainder, add twice y. To the said Remainder add the Log. of b+2y, and half the Sum shall be Log. of b+2by, from which square Root substract be the residue will be very near the Increase, or r-1: and adding 1, the rate r is found. If extream Exactness be desired let r thus found be assumed. If extream Exactness be desired let r thus found be assumed, and $\frac{z}{4}r-r^{t}$ compared with $\frac{z}{4}-1$; will always be greater than it: and dividing the Excess by $r^{t-1}-\frac{z}{4}$, the Quote

greater than it: and dividing the Excess by $r r^{t-1} - \frac{z}{r}$, the Quote added to r shall verify as many more Figures in the rate as were true in the assumed r.

Example.

An Annuity of 34. 41. forborn 12 ? Years amounts to 6144, 4328. It is required what rate of Interest is allowed.

I. After

I. After the same manner the four Cases relating to the Purchase of Annuities are readily solved by Logne, and the Theorems discovered with the same Ease; for a, $\frac{a}{r}$, being a Scale of mean proportionals in the ratio of r to 1, put y for the Sum of all the Consequents infinitely continued, whereof _ is the first, and that Sum will be to the Sum of all the Antecedents whereof a is the first, as 1 to r. that is 1. r::y: ry. So that ry = y + a, and $\frac{a}{r-1}$, will be equal to y the va-Rue of the Fee, or the Sum of all the mean proportionals less than 4. And by the same Rule - will be the Sum of all the means less than -, or the value of the Reversions and fubstracting the one Sum from the other $\frac{a}{r-1} - \frac{a}{r^{t} \times r-1}$ will be equal to z the Sum of all the means, whereof $\frac{d}{dx}$ is the greatest, and -the least. Wherefore from Log. of the Annuity fubstract Log of r-1, and from the residue substract also the Log. of re, the difference of the Numbers answering to the two Remainders is the present Value sought.

Example.

What is 70 l. per Annum to continue 59 Years worth in prefent Money, at the rate of 5 per Cens. per Annum.

The same Equation may be reduced to the following Proportion, as r-1 to a, so $1-\frac{1}{r^2}$ to z the present Value sought. Wherefore take Ar. Co. of Log. of r^2 , and substract from Unity the Number answering thereto. To Log. of the Remainder add Log. of a and Ar-Co of r-1, the Sum shall be Log. of z. As in the former Example,

```
Let. 7"=12301687:
 . Ar.Co. 8,7498313=+,0952128
                     19437877 Log. 919748742
                              Log. a 1.8450980
                            :- Co:Ar,1,9020300:r-1
                      ..... Log. 2 3.1210022 == 1321,3018
 ...IL If the Time he fought, having the Amounty, prefent worth
and rate of interest given, r will be equal to _____ (or the Her)
 divided by the Value of the Reversion, that is by \frac{2}{r-1}
 Whence the Rule. From Log. of the Annuity, fubitract the Logi
 of the Interest of rich with what remains feek the Natural
 Number, which will be the Value of the Fee; from it substract
 the present worth, the residue is the Value of the Reversion.
 Take the Log. thereof from the Log. of the Fee, and the relidue
 will be Log of r. Wherefore divide that residue by Log. of r.
 the Quotient will be t the number of Years fought.
                           Example.
   In what time will an Annuity of 701. per Annum pay off a
Debt of 1321 l. 3028. allowing the Creditor 5 per Cent. per Ann.
       1.8450980 Log. 70 = 4

III. Having the Time, Rate of Interest, and present worth proposed, to find what Annuity that Sum shall purchase. By
tenisposing the Proportion mentioned in the first Problem, it
will being it to a form to a the Anduity fought.
 Wherefore from the Sum of the Logarithms of z and r-t fub-
traft the Log. of 1-1, the Remainder shall be Log. of s......
```

Example.

What Annuity to continue 59 Years can be purchased for 1321.3028 1. at the rate of five per Cent. per Annum.

Log.
$$r^{1} = 1.2501687$$

Co. Ar. Log. $\frac{1}{r^{1}} = 8.7498313 = .0562123$

$$1 - \frac{1}{r^{1}} = .9437877 \text{ Log. } 9.9748742$$
Log. $z = 3.1210022$
Log. $r = 1 = \frac{8.6989700}{1.8199722}$

$$9.9748742$$
Log. 4 1.8450980 = 70

• IV. The Annuity, its present worth, and time of Continuance being proposed. It is required to find the Rate of Interest, that is a, z and t being given to seek r.

This Problem being of more Difficulty than appears at first Sight, and requiring the solution of this Equation $\frac{a}{z} = \frac{z+a}{z} r^z$

Method of approaching the Root r, which is by no means evident: And that Approximation as the Number of Years and Rate are greater or less, cannot properly be obtained by one general Rule; but rather by two, according as the Value of the Reversion is greater or lesser.

If the number of Years be great (as suppose 40 or upwards) especially if the Rate of Interest be high. $1 + \frac{\pi}{2}$ will be nearly the Rate, or more accurately $\frac{z+\pi}{2} + \frac{z+\pi}{2} \times \frac{\pi}{2}$. Call it r:

and $\frac{4}{r^{\epsilon} \times r - 1}$ will be exceeding near the Value of the Reversion.

Let it be x, then $1 + \frac{a}{z + x}$ shall approach the true Rate sufficiently. But if greater accuracy be desired by repeating this process you cannot fail of your Desire. Hence this Rule: From Log. of a, as also from Log. of z + a, take Log. of z, this latter Remainder shall be nearly the Log. of the Rate Multiply that Log. by z, and to the Arithmetical Compliment of the Product, add the first Remainder. The Decimal answering to the Sum taken from the former Rate shall give a more correct

i.

Rate. With that Rate, seek the Reversion after the Time given = x, which add to z. From Log. of a take Log. of z + x: The Remainder shall be the Log. of the Interest or r - x sufficiently near.

Example.

1321, 3028 l. is paid for an Annuity of 70 l. per Annum for 59 Years to come. I demand the Rate of Interest allowed the Purchaser.

If the number of Years be small, the aforesaid Rule will avail little. In this Case it will be requisite to approach the Rate thus. Let $\frac{r+1}{2}$ be the Index of a Root of $\frac{a-r}{2}$; from which Root take Unity, and the remainder call y, and let $\frac{6}{t-1}$ be called b. I say, that $1+b-\sqrt{bb-2by}$ is sufficiently equal to r the Rate sought, and will be still nearer the Truth, as the Number of Years is smaller; and the Error that is will be always in Excess. Hence the Rule: Divide the Logarithm of $\frac{a \times r}{2}$ by $\frac{r+1}{2}$ and from the Number answering to the Quote take Unity: Double the Remainder, and subtract it from b; that is from the Quote of fix divided by t-1: To the Logarithm of what remains, add the Log. of b. Then the Number answering to half the Sum of those Logarithms taken from 1+b will leave the Rate sought.

Erami

Example.

An Annuity of 20 l. per Annum, to continue 21 Years, is fold for 220 l. I demand the rate of Interest allowed the Purchaser.

The Rate r thus found is always fame finall matter too big, the true Rate being 1.06814; but as the Number of Years are fewer, the Error becomes infensible. If greater Exactness be required, 'twill be easy by the general Method for the Resolution of Equations, having so near an Approximation to prosecute this enquiry as far as you please. But this seems abundantly sufficient for Use, which is our principal Design in this Place.

Lastly, By way of Corollary to the former. Let it be required to find the Rate of Interest allowed the Purchaser when he pays a Sum $x \in \mathbb{Z}$, for an Annuity $x \in \mathbb{Z}$, wherein he has already a Term $x \in \mathbb{Z}$, to have it prolonged for a cartain Time $x \in \mathbb{Z}$. As for Example, I have an Annuity of 20 l. par Annuity for the Term of 21 Years, and for 40 l. paid down, I can have my Term prolonged for 10 Years more, or to 31 Years. I demand, what Rate of Interest is allowed ma. Rule. Call 2t + x + 1 by the Name of T, and $\frac{1}{x}$ T shall be the Radical Sign of a Root of $\frac{a \times x}{z}$. Let $\frac{1}{x}$ $\frac{a \times x}{z}$ be equal to x + y, and $\frac{a \times x}{z} = b$. I say the Rate sought is very near to x + y. As in the aforegoing Example.

Log.
$$a = 1.3010300$$
Log. $x = 1.0000000$
 2.3010300
 1.6020600
 2.3010300
 $3.24 = b$

Log. $b = 0.5105450$
 $3.24 = b$

Log. 0.4934257
 $3.114768 = b-2y$
 1.0039707

V 0.5019853 3.176768 $\sqrt{bb-2by}$

The Rate = $r = 1.063232$
or 61. 62. 5 d. per Cent.

As will be readily proved by seeking the Value of the Reversion of an Annulty of 20 l. per Annum for ten Years after 21; at the rate of 1,063232 per Cent. The Work stands thus.

Thus it appears that 40 l. and about one Penny, is the true Value of the Difference of the Reversions: by which the Reader may judge how near an Approximation the foregoing Rule afords, towards finding the Rate of Interest, when the Value of an Annuity for a Term of Years to commence after a certain Time is proposed.

The Propositions of Navigation that occurr in the Practice of Sailing by Mercator.

The this Collection of Tables, we should by no means have omitted that most necessary one of the Meridional Parts, designed for the Service of Navigators, if its Uses were not fully supply'd by the Table of Logarithmick Tangents: As is demonstrated in N° 219 of the Philosophical Transactions. It is there proved. 1°. That the Meridional Line, or Scale of Mercator's Chart, is a Scale of the Logarithm-Tangents of the half Compliments of the Latitudes. 2dly, That such Logarithm-Tangents of Mr. Briggs's Form, are a Scale of the Differences of Longitude, upon the Rhumb which makes an Angle of 51°. 38'. 9". with the Meridian. And 3dly, That the Differences of Longitude, on differing Rhumbs, are to one another as the Tangents of the Angles of those Rhumbs with the Meridian.

Hence it follows, that the Difference of the Logarithm-Tangents of the half Compliments of the Latitudes, is to the Difference of Longitude a Ship makes in Sailing on any Rhumb, from the one Latitude to the other, as Tangent of 51°. 38'. 9". (whose Logar. is 10.1015104:) to Tangent of the Angle of the Rhumb or Course with the Meridian. So that if two Latitudes, and the Difference of Longitude be given, the Course is readily determined by this Rule. Take, by help of the Tables, the difference of the Logarithm-Tangents of the half Compliments of the Latitudes, esteeming the three last Figures to be Decimals; and substract the Logarithm thereof from the Sum of the Logarithms of the Difference of Longitude reduced to Minutes, and of the constant Log. 10.1015104. The Sum shall be the Log. of the Tangent of the Course. And to Log. of the Secant of the Course, add Log. of the Difference of Latitude reduced to Minutes, the Sum shall be Log. of the Distance in Minutes.

Example..

The Lizard is in Lat. 49°. 55°. North. Barbados in 13°. 10°. N. Difference of Long. 53°. 00', or 3180 Minutes. Difference of Lat. 2205 Minutes.

Comp. Let. \{76°.40'\} \sqrt{36°.25'} Ten. 0.8993082 \\
20. 2 \frac{1}{2} Ten 9.4620477 \\
\text{Dif.} 3372,605 \\
\text{leg.} 3.5279654 \\
\text{Leg. dif. Teng.} \\
\text{Teng.} 49°. 59'. 10'' \text{10.0759721} Teng. Comple. \\
\text{10.1018071} \text{Secent Emerfe.} \\
\text{3.3434086} \text{Leg. diflexive.} \\
\text{Minners.} 3429,38 \\
\text{3.5352157} \text{Leg. diflexive.} \\
\text{diflexive.} \\
\t

. Thus may a Ship at Sea estimate the true Course she must Steam, and the Distance of her Port.

II. If two Latitudes and the Course be given, the Disserence of Longitude is obtained with the same Ease: For as Tangent of \$1°. 38'. 9". to the Tangent of the Course, so the Disserence of Logar. Tangents of the half Complements of Latitudes, to the Disserence of Longitude sought. Wherefore from the Sum of the Logarithm-Tangent of the Course, and of the Log. of the said Disserence of the Logar. Tangents of the half Complements of the Latitude, substract the constant Log. 10.1015104: the Remainder shall be Log. of the Difference of Longitude in Minutes: as in the former Example. Let the Latitudes be 49°. 55'. and 13°. 10, and Course 49°. 59'. 10".

The Differ, of the Log. Tang. 3372,609 its Log. 3.5279654

Log. Tang. Courfe to 0759721

13.6039375

10.1015104

Log. Long. = 3180. 3.5024271 or 53 gr.

By this Rule, having two good Observations of the Latitude and the Course duly stear'd, the reckoning of a Ship's Way is best as-

certained, especially if you Sail near the North or South.

III. The Latitude you depart from, the Course Stear'd and distance Sail'd being given, 'tis required to find the Ships Latitude and Difference of Longitude. First the Latitude is obtain'd from the Consideration that the Distance is to the Difference of Latitude or the Hypotinusa to the Base, as Radius to the Co-sine of the Course, which is common to Plain-sailing. Then having the two Latitudes and Course, the Difference of Longitude is found by the last Rule.
